the Terminal (Ubuntu menu > 'Terminal '). Fire up `mysql` in root mode with the command `mysql -u root -p` (by default, the password for the root user is a blank). This will bring up a '`mysql>`' prompt. To create a database, run the following command:

```
create database phpbb;
```

It should respond with something like "Query OK, 1 row affected (0.44 sec)". Our database has been created. Now, the rest of the installation can continue from a Web browser of your choice.

Configuring phpBB

In your Web browser, go to '`http://localhost/phpbb`' (or whatever folder name you used when extracting the archive). You will be greeted by a page as shown in Figure 1. Click the 'Install' tab to begin installation, which will result in the page shown in

Figure 2. The phpBB installer script will now check whether all the requirements have been addressed (Figure 3). Some may not have been, but that's fine as long as the minimum are met.

Click the button to proceed to the next screen (Figure 4). This is where to enter the database details. The host will be '`localhost`', the database name '`phpbb`' and the username '`root`'. Figure 4 shows a password for `root` because I happen to have one set on my system; you can leave the field blank if it's a default install of MySQL. phpBB will test the connection (Figure 5). Once it is successful, you can proceed to the Administrator details page (Figure 6). Enter information like the administrator username and passwords. phpBB will then run some admin tests to check the data (Figure 7). Once the admin tests are done, it will write the configuration file (Figure 8).

This is followed by the advanced settings screen (Figure 9). Let's leave things as they are for now. You may enter SMTP server information if you want it here, to send out emails.

phpBB will then create the tables and a report about whether this was successful or not (Figure 10). Follow this to see the conclusion screen for the installation (Figure 11). At this point, rename the '`install`' directory in `/var/www/phpbb/` to avoid accidental re-install or misuse. If this is not done,
