Figure 9: phpbb-advancedSettings

Figure 10: phpbb_dbtables-created

we will not be able to use the forum; only the Administrator Control Panel (ACP) will be accessible.

Now navigate your browser to 'http://localhost/phpbb' for the forum's index page (Figure 12). Now, customise this forum to suit your tastes and requirements. Log in as the administrator, and at the bottom of the index page, you will see the link for the *Administrator Control Panel*; click on it to access the ACP (Figure 13). Here, you can modify most parts of the forum—add/manage users, set up categories and topics, view statistics, etc.

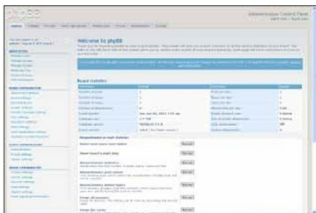

Figure 13: acp

So, we have now set up our very own forum. Since it's all PHP code, we can customise it beyond the options available in the ACP. Of course, for most of us, that won't be necessary, but if you're hungry to hack away, feel free to do so! Off you go; hold discussions to your heart's content on the new forum you just set up. Until next time, adios!
