

Tor project plans a Firefox fork

The Tor project is planning to launch its own fork of Firefox that will include Tor integration. At present, users who want to use the decentralised Tor network to browse the Internet anonymously, install the Firefox extension Torbutton and additional Tor software. Developer Mike Perry writes on the project blog, "I think we should completely do away with the toggle model, as well as the entire idea of Torbutton as a separate piece of user-facing software, and rely solely on the Tor Browser Bundles, except perhaps with the addition of standalone Tor+Vidalia binaries for use by experts and relay operators."

Oracle organises JavaOne and Oracle Develop 2011 in India

Oracle recently organised the 'JavaOne' and 'Oracle Develop 2011' conferences at the Hyderabad International Convention Centre, Hyderabad. The two conferences gave an opportunity to Java developers and those using Oracle technology, to have a glimpse into the world of Java, Oracle software and hardware and the future of these technologies.

Held in India for the first time, 'JavaOne' allowed attendees to explore, share and collaborate on the latest developments and technologies related to Java, while 'Oracle Develop' featured sessions that focused on Oracle products and technology, which are based on open standards. The conferences covered topics essential to the technology community and provided hands-on learning focused on Java and next-generation development tools from Oracle, including rich enterprise applications (REAs), mobility, and service-oriented architecture (SOA).

Keynote speakers included Nandini Ramani, vice president of Java Client Development at Oracle in the Fusion Middleware Group; Param Singh, senior director for Java Product Management at Oracle; Amit Zavery, vice president of product management for Oracle Fusion Middleware and Java products; and Hal Stern, vice president and the CTO of the Junos Space Business Unit, Juniper Networks.

Sony to launch Android tablets in September

Later this year, Sony plans to launch two models of tablet computers with a touch panel. Both models will run on Android 3.0.

The model, codenamed S-1, will feature a 23.9-inch (9.4-inch) display, while S2, a smaller mobile device with a 14-inch (5.5-inch) screen, can be folded like a book. The products will go on sale in September but prices are not yet known.

Oracle subpoenas Apache on Java patent

Oracle has subpoenaed the Apache Software Foundation (ASF) and has asked it to release documents relating to

Android popular as a game development platform

Many developers are opting for Android as their choice of gaming platform as they feel they're doing better on Android than iOS. On both smartphones and tablets, it is Nvidia that sets the standard for an Android gaming performance with its Tegra 2 processor. This enables HD gaming for devices on most major wireless carriers in the US. GameStop, OnLive, Sony Alienware and Valve are among those who are embracing Android.
