

Large **SMP** systems are now as affordable as **HPC**

Problem Statement	Relative Cost		
	SMP	x86 clusters	Tyrone SMP
R&D and manufacturing cost	High	Low	Low
Initial acquisition cost			
Installation and ongoing cost	Low	High	Low
Programming cost			

High Performance Computing (HPC) applications have always needed faster and larger systems, historically served by SMP systems. An alternative for large SMP systems evolved in the late 90s when x86 processors exceeded the performance of RISC processors, promoting the adoption of commodity server clusters connected with high-speed interconnects. Cluster solutions deliver more performance than traditional SMPs, but are more difficult to program, implement and manage.

We at Tyrone systems deliver SMP system, a software based computing-architecture that combines the advantages of shared-memory systems and the price points of commodity clusters by leveraging off-the-shelf x86 components

16 CPU / 96 Core SMP System with 384GB @ US\$ 70,000/- *

(16 x Intel Xeon 6 Core 2.8 Ghz, 384 GB RAM, 16 x 500 GB HDD in 5U Rack Mountable)

* Continuous supplied
