Shift-clicking an icon launches a new instance of an already-running app; tiny lights show multiple instances. You can drag-and-drop to rearrange icons, and remove an icon by dragging it off the bar. To quit an app, right-click and select *Quit* from the menu. The Ubuntu button (top-left corner of the screen) gives you an iPad-like home screen, with high-resolution icons for your favourite destinations. The Workspace Switcher feature, accessed via a side-bar icon, defaults to four virtual desktops.

Mac-like app menu bar

The Ubuntu 10.10 netbook edition missed the very important unified menu bar. Yes, Natty has made some Apple-like changes—the top bar serves as a universal app menu bar, displaying the application's menu bar (when they have one) here, instead of in the app window. Natty thus provides users the maximum possible vertical screen space.

Unity's keyboard navigation

Another addition with Unity is navigation for keyboard short-cuts, most of which use the Windows key. Holding down the Windows key shows numbers for each dock item; launch one by pressing the corresponding number. Tap the Windows key for a quick-search box from the upper-left corner, which lets you launch applications, search files

and folders, and access system settings and utilities. For a wallpaper with a complete keyboard short-cuts listing, visit <http://askubuntu.com/questions/28086/unity-keyboard-mouse-shortcuts/34876#34876>.

Updated software defaults

The Linux kernel is now the much more stable version 2.6.38.2, so users get improved overall system performance. The open source Banshee 2.0 Music Player, which replaces Rhythmbox, was originally named Sonance, until 2005. It uses the Helix and GStreamer platforms for handling media formats. It supports bookmarks, the Amazon MP3 store, video support, audio books support for libraries, metadata fix-up, integration with the sound menu, and a few more features.

Natty uses LibreOffice 3.3.2, developed by The Document Foundation, which is a fork of the well-known OpenOffice.org. With the same features as OpenOffice, it will be easy for users to switch to LibreOffice. Firefox 4 débuts as the default browser in 11.04. With an improved user interface, 'door-hanger' notifications, a redesigned extension manager and Firefox Sync, users now have a modern browser.

The updated Software Centre, Ubuntu's version of an app store, is already well-liked by users since the release of Ubuntu 10.10. The Ubuntu One control panel now supports selective file synchronisation, and the synchronisation itself is improved. The launcher icon also displays file
