installations just as well. However, if you wish to store your backup data on Amazon, you need to subscribe to Amazon's cloud storage service. Click *Skip* for the time being

16. You will now be prompted to *install* security updates; please choose *Install*, as it is a one-time operation. Once the updates have been applied, you should see a screen like the one shown in Figure 7.

Checking it out

Do a test connection to the appliance by visiting the IP address mentioned in the console, which may differ for your installation.

Figures 8 and 9 show the server home page and Apache service status.

To make things even more user-friendly, Turnkey Linux has included the famous Webmin (Web-based server administration

Figure 9: Apache Web server status

Figure 10: Webmin home page

for managing Linux servers) as part of this appliance. To access the Web Console, from the home page click the Webmin icon. You will be asked to accept the security settings; do so and you will be taken to the Webmin login page. Log in as root, with the password you set during the first boot. The Webmin home page is shown in Figure 10.

Now wasn't that a breeze? You now have your personal LAMP stack up and running, ready to serve your websites...

I hope you found this tutorial informative and feel free to share your feedback. **END**
