

YOU SAID IT

they are explained and presented in the most innovative and interesting ways. I must say that in the last three years the magazine has improved, tremendously. Keep up the good work :-)

—**Mohammad Khalid,**
khalid.81088@gmail.com

ED: First of all, I would like to thank you, profusely, on behalf of the entire LFY team for these kind words of appreciation and encouragement. We are thrilled to read your note.

We are also glad to know that you have been reading the magazine for the last three years and like the content and presentation of the magazine. We have conveyed your words of appreciation to the two authors, whose articles you made particular mention of.

We will try and continue with our efforts to make the magazine even better in the future. Please do keep sharing your feedback with us on how we can improve the magazine further; we need readers like you to keep supporting LFY!

The LFY layout designs are brilliant

I have been reading LFY for a while now. I really like the content and the way the articles are designed. Keep up the good work.

—**Edwin,** ieemeister@gmail.com

ED: Thanks! We are happy to know that you like the magazine's content and design. It was only last month that we tried to give a new look to the magazine. Your feedback will help us improve the magazine even further.

Kindly provide some information on cloud computing

I am very new to cloud-related concepts. I need some information on cloud-based

applications as I want to convert my existing Web application to support the cloud. Could you suggest some books, links or training institutes, which can help me in acquiring more knowledge on this subject?

—**Nathan,** mnuthan@gmail.com

ED: I wonder if you got to read the February edition of *LINUX For You*, which included two very good articles based on cloud-related concepts, viz.: 1) *Demystifying the Cloud with eyeOS*, and 2) *Up Close and Personal with NoSQL*.

You may also find the following YouTube video of use: http://www.youtube.com/watch?v=ae_DKNwK_ms. It presents a bird's eye view on cloud computing.

Securing Apache is now available, online!

Thanks a lot to the LFY team for publishing the 'Securing Apache' series of articles. They have helped me gain a lot of insight into aspects related to Web security. Thanks again:-)

Unfortunately, I do not have access to Part-1 and Part-2 of the series. I have also searched www.linuxforu.com but could not find it. I will be very grateful if you post these sections of the series on the website too.

—**Harsh Goyal,**
goyal.harsh99@yahoo.com

ED: We are glad to know that you, like many of our readers, like the *Securing Apache* series and find it useful. You would be happy to know that most parts of this series are now online. Kindly visit linuxforu.com

Virus in FossBytes

This is regarding a news item published in the FossBytes section of *LINUX For You* February 2011 edition. The snippet, 'iPhone

more secure than Android: Report' carried a quote by Steve Change, chairman, Trend Micro, which stated that Android is vulnerable to hackers and viruses because it is open source. Frankly speaking, I was very unhappy to see such a statement against open source in LFY.

The very fact that Android is more secured is because of its open source factor. To my understanding, the more the developers look at and work on the code, the more secure and better it becomes. I am sure no one can say that Microsoft Windows is more secure than any of the Linux distributions just because its source code is closed?

Although LFY can publish such opinions, but the magazine should also defend such a baseless statement to uncover the ignorance and myths related to open source.

—**Srikanth Vital,**
srikanth.vital@tnq.co.in

ED: We do understand and appreciate your sentiments, which is why we made sure to highlight the fact that the published statement is an opinion of an individual/company and not that of the magazine or the journalist who compiled this section.

On another note, we do agree with the facts highlighted by you regarding open source software, in general. **END**
