

Figure 1: Radiant has a simple interface

developing extensions. Edit the database information at `RADIANT_DIRECTORY/config/database.yml`. Then execute the following to complete the set-up:

```
$ rake production db:bootstrap
```

Once installed, you can test the installation by executing the code below:

```
$ script/server -e production
```

Radiant should welcome you if you point your browser to `http://hostname:3000`. The default username is `admin` and the password is `radiant`.

## Deployment with Passenger

How do you integrate Ruby on Rails into Apache on a typical GNU/Linux-based server? It's easier than you think. The awesome tool called Phusion Passenger (a.k.a. mod\_rails), takes care of this business. First, install Passenger from Gem:

```
# gem install passenger
```

Next, execute the following command to set up Passenger:

```
# passenger-install-apache2-module
```

During the set-up, follow the instructions to add a `LoadModule` line into the Apache configuration. Normal

Vhost configuration applies here, except that the `DocumentRoot` should point to `RADIANT_DIRECTORY/public`. Restart Apache to load Passenger.

## A simple page in XHTML

The ultimate goal of this article is to guide you through the first steps of using Radiant. I find that writing a simple page in HTML, with header, menu, content, and footer, along with CSS, effectively demonstrates the basic functions Radiant can perform.

Once you log in to your newly installed Radiant, you will be welcomed into 'Pages' in the 'Content' tab, with one parent page (the root page). First, we create a child page by clicking 'Add Child'. This is where the content should be. Now create a child as follows:

```
Page Title: linuxforu
Body (Filter: none)
<h2>Linux For You!</h2>
<p>Linux for you! Lorem ipsum dolor sit amet, consectetur adipiscing elit. Pellentesque posuere consequat ipsum vitae consequat. Fusce vitae tortor ut nibh ultrices tincidunt in a est. Aenean ut velit eros, non gravida ipsum. Integer rutrum neque a est bibendum venenatis.</p>
Layout: <inherit>
Page Type: normal
Status: Published
```

The page title is the filename, so accessing `http://hostname/linuxforu`

# STUDY GUIDE

RHCE SERIES

## LINUX ESSENTIALS, SERVICES & SECURITY

LEARN BY EXAMPLE

VIPIN GUPTA

Price: US \$40, India Rs. 650/-

*This study guide starts from basics & takes you to advance levels of linux. everything has been explained by giving examples. Proper lab setup along with diagrams has been given so that you can constructs the labs yourself & do the practice. It covers the course contents of RHCE. It is for those who wants to start fresh as well as who have done RHCT/RHCE*

Want to have an edge over others then read the guide

LINUX ESSENTIALS, SERVICES & SECURITY

Learn By Example

About Author: Vipin Gupta is BE, RHCE, CEH, ASM, CCNA, MCSE, MCSA. He has got more than 17 years of experience in IT related fields & working on Linux platform for past 11 years. During his long career, he has been associated with various engineering colleges, polytechnics, private institutes, & corporate sector. He is interacting with both academic & corporate world

*It is available in ebook as well as paperback format. paperback edition is available only through direct order.*
