

An IT Consulting Company Develops a Scalable Enterprise Solution Using FOSS

Focuz Infotech, an open source solutions provider and one of the winners of the *LINUX For You* and EnterpriseDB run “Calling The PostgreSQL Users” December 2010 contest, tells *LINUX For You* how it developed a successful ERP solution for its parent group, using PostgreSQL and many other open source tools.

Focuz Infotech is an IT consultancy company that was established in 2000. Its parent firm—Focuz Group, a multi-million dollar business conglomerate—provides services to over 5,000 customers daily through its 90 branches spread across the country. To streamline its operations and to manage its database, the group required an enterprise resource management system. It was at this point that Focuz Infotech undertook to build an ERP solution for its parent company, using a plethora

of open source tools and the PostgreSQL database management system.

Why open source?

Until 2008, the Focuz Group used solutions based on the Microsoft platform, but eventually realised that this was proving to be an expensive proposition. Apart from this, the systems were prone to virus threats. “It is then that the Group felt the need for strong and reliable applications with high performance and lower costs.
