

YOU SAID IT

A few wish lists!

I recently went through the January 2011 edition of *LFY*. It was like a technical feast that fulfilled my thirst to learn and acquire more practical knowledge on open source software.

Kudos to the *LFY* team!

I have a few requests to make. It would be really helpful if you can come up with some articles on the following topics in forthcoming editions.

- 1) Articles on open source testing frameworks (example: Selenium), development frameworks, etc.
- 2) Articles on open source project management and requirements management tools.
- 3) Hands-on tutorials on developing applications for smartphones, with live examples.

—LNT Prasad,
prasad_th@yahoo.com

ED: Thanks for your words of appreciation for the magazine, and also for sharing your wish list with us. When you read the March 2011 issue of *LFY*, you will find three to four articles on frameworks, including Hadoop and Selenium.

We have taken note of the other subjects of your choice. You can expect to find articles on these topics too in one of the forthcoming editions of the magazine, shortly. Please do keep writing to us with your feedback and suggestions.

I wish to make one request related to the content. It would be great if the *LFY* team considers including a few articles every month about any of the ongoing open source projects. These articles should aim at attracting developers to contribute to these projects. The article can include details on the procedure to contribute to the project, while also explaining the key aspects of the project.

radhakrishna12@gmail.com

ED: Thanks for writing to us. This is definitely a very good idea. We have already conveyed this suggestion to our editorial team and authors. Hopefully, we will soon begin to include such articles in our forthcoming editions.

Please do keep reading and sharing your invaluable suggestions with us in the future too. This helps us in improving the magazine and in addressing the requirements of our target readers, better.

Please throw some light on the new and better open source alternatives to technology tools like 'Hyper Terminal' or 'Telnet' for PC-to-PC communication, but without the use of the Internet. This will certainly benefit people in rural areas, where Internet availability is an issue. I can't recall having seen any write up on this subject in any of the past editions of *LFY*.

—P. V. Satpute, pvsatpute@rediffmail.com

ED: Thanks for the suggestion; a very appropriate idea, indeed. We will soon check with our panel of experts and get someone to write on this topic. Please do keep writing in with suggestions for topics that you would like us to include in the magazine.

A pat on the back for interesting content, layouts, DVDs, et al...

I have been reading *LINUX For You* for over two years. What I really appreciate about the magazine is that there is something new and innovative in each edition.

Since I am learning SQL, I really like the questions included in the article series: *Better Queries With MySQL*. But my favourite element always remains the Linux distributions DVDs, which are bundled with the magazine every month. February's issue that came

packed with the Sabayon 5.4 DVD was an excellent one.

I also have a request to make. If possible, kindly provide the latest version of the Debian distro in any of the forthcoming editions of the magazine. I would be eagerly waiting for it!

—Amit Kumar,

ED: We are really glad to know that you find the content of the magazine useful. We are also happy that you like the Linux distro DVDs.

As regards your request for the latest Debian distro, you will find the Debian 6.0 distro DVD packed with this edition. Enjoy it and please do keep reading the magazine and sharing your thoughts with us!

First of all, I wish to congratulate the entire *LFY* team on completing eight years of excellence in publishing great content related to Linux and open source.

I still remember the day when I bought my very first *LFY* magazine in 2007. The edition bundled the Debian 4 distro along with its 18,000 packages. That introduced me to a whole new world of Linux and open source. Using that DVD, I tried to install the Linux operating system by formatting my hard drive. Though I failed in the first four attempts, by the fifth attempt I succeeded. That was when I was in my second year of my bachelor's degree. Ever since, I have been reading the magazine regularly.

I congratulate the whole team on publishing immensely interesting series like 'Securing Apache' and 'Better Queries With MySQL'.

I just finished reading these articles a while back and thought of writing this note to the *LFY* team to share my appreciation.

I am eagerly awaiting the continuing sections of these articles. Currently, the best thing about the *LFY* articles is that
