

Beetel to launch Android phone by November

Bharti Teletech (Beetel) is planning to enter the smartphone market in India, following its entry into the tablet market with Magiq. It will be launching an Android smartphone and also an LTE device in October, around Diwali.

The phone is to have an 8.1 cm (3.2 inch) display, a 1 GHz snapdragon processor, also used in Beetel's tablet Magiq, and the Android 2.3 operating system. It will also have the standard Android applications and features like G-sensor and Google Maps.

The smartphone is expected to be priced at less than Rs 9,000.

LG's Optimus Sol to be out in markets soon

LG Electronics has announced its latest model LG E730 or Optimus Sol in its Optimus smartphone series. The smartphone will have the Android 2.3 Gingerbread operating system, and most of the features of a smartphone other than an Ultra AMOLED display.

According to LG, the Optimus Sol's 9.7 cm (3.8 inch) WVGA 'Ultra AMOLED' display has a two-fold advanced reflection rate compared to standard AMOLED displays. This helps reduce image quality degradation. Other specs of the smartphone include a 1GHz processor with enhanced Flash 10.1, and a 5 MP rear camera. The phone will most probably be released in South East Asia by early next year, though the company has not yet confirmed dates. However, it will be introduced in Europe next month, and will soon after be rolled out in Central and South America.

The pricing details are not yet available but it is expected to be a mid-range phone.

Google Docs app for Android updated

According to a blogpost by Tobias Thierer, software engineer, Google users can now take pictures with their Android phones and use the new Web Clipboard feature to insert them into a Google document. The new features of the Android app also include improved 'open' and 'send' options. A doc can be sent as an application through e-mail or any other app on the phone, and it can even be opened with any compatible viewer application. The docs will also now be available in 45 languages other than English.

Chandamama app on Android App Store soon

The popularity of the *Chandamama* app on the iOS App Store has motivated India's oldest children's magazine to leverage it on the Android platform as well. The magazine had launched its app on iPhone and iPad in July this year. The number of downloads touched 3,000 within three weeks of its launch.

The magazine has also launched the application in nine regional languages that include Hindi, Marathi, Sanskrit, Telugu, Tamil, Bengali, Malayalam, Kannada and Gujarati.

Oracle unveils Oracle VM 3.0

Oracle has launched Oracle VM 3.0, the latest release of Oracle's server virtualisation and management solution. Oracle VM 3.0 is suitable for all data centre workloads, and features new policy-based management capabilities, along with advanced storage management via the Oracle VM Storage Connect plug-in API. It also has centralised network configuration management, improved ease-of-use and Open Virtualization Format (OVF) support.

Facebook building a team to focus on OSS

Facebook is building a team that focuses on OSS and Web standards. Facebook open source guru David Recordon said that he is focusing on both bringing in and pushing out good open source projects to the company's engineers and the larger community. Phabricator is one such project.

Sony fails to impress analysts with new tablet

The first tablet from Sony, which runs on Google's Android software, has failed to impress critics and analysts. The tablet has been criticised for its high price and features. The two versions of the Sony tablet would cost \$499 and \$599, which would be the same as the price of the two lower end Apple iPad models.
