

optimised for Intel's Atom processors. The Atom chips currently run in laptops and tablets offered by manufacturers like Sony, Acer, Lenovo and Dell, but their usage in smartphones is restricted to a handful of companies. Intel now aims to cash in on Google's bestselling smartphone software.

Linux Foundation discovers security breach

All users of the Linux.com and LinuxFoundation.org sites have been informed about a security breach that the Linux Foundation discovered on September 8, this year. The

Foundation believes the breach is connected to the security breach at kernel.org at the start of September. "As with any intrusion and as a matter of caution, you should consider the passwords and SSH keys that you have used on these sites compromised. If you have reused these passwords on other sites, please change them immediately," the Foundation advised.

Talend named winner in InfoWorld Bossie awards

Talend, a global open source software leader, has been honoured for the third consecutive year by IDG's InfoWorld as a recipient of the Best of Open Source Software awards (Bossies). Talend Open Studio, the Company's leading-edge open source solution for data integration, was recognised as a winner in the "Best open source data centre and cloud software" category for its ability to dramatically improve the efficiency of data integration job design, enable rapid deployment, reduce maintenance costs, and offer support for all types of data integration, data migration and data synchronisation operations.

Open access publishing by ICFOSS

The International Centre for Free and Open Source Software (ICFOSS) is all set to step into the domain of open-access publishing with the release of the Journal of Free Software and Free Knowledge. The objective is to provide free, instant, global and indexed access to published literature, without affecting its quality.

Joomla achieves over 25 million downloads

Joomla, one of the world's most popular open source content management systems (CMS), has been downloaded more than 25 million times. With 2.7 per cent of the Web running on Joomla, the software is used by individuals, small and medium-sized businesses (SMBs), and large organisations worldwide to create and build a variety of websites and Web-enabled applications.

AGL launches Linux hosting website in India

AdGlobal360 (AGL) has launched a new website called YoFroggy.com that aims to provide website domain booking and hosting services based on a Linux platform in India. Rakesh Yadav, head of AGL India, told Economic Times, "YoFroggy will provide end-to-end services to our customers—from the registration of domain names and the development of websites to promoting and marketing the website. Our attempt is to sell 15,000 packages by the end of 2012." YoFroggy has four types of offers—Jumpstart, Essential, Business plus and Enterprise plan, costing Rs 1,999, Rs 3,499, Rs 4,100 and Rs 4,999, respectively, on a Linux hosting platform. The packs also come with a free website builder tool.

Google grabs 1023 IBM patents

Google has purchased 1023 patents from IBM after having bought 1030 patents earlier in July. The present transaction apparently took place in August this year as discovered by the SEO by the Sea blog and confirmed by a Google spokesperson. The new patents cover cellular telephone communication, location updating and search patents such as the audible presentation of a Web page, balancing browser bandwidth use and dynamic hyperlink text. Some Java-related patents and scripting patents have also been included. At the beginning of the year, Google had only 809 patents. Currently, however, the figure stands at around 20,000.
