

openindiana

A Free Fork of the Solaris OS

Part—2

In the previous article, we got acquainted with OpenIndiana—on how to install the base system, find and deploy packages, and perform maintenance tasks with ZFS. This part is devoted to isolated and virtualised environments, and to disk management.

VirtualBox

Sun Microsystems, and now Oracle, oversee the development of the emulation project called VirtualBox. However, this package couldn't be found in the OpenIndiana (OI) repositories. To install it in OI, grab the gzipped package here [1] and manually install it. The archive is called "VirtualBox 4.1 for Solaris hosts x86/amd64". Please unpack it, and then run `pkgadd`:

```
root@openindiana:/home/anton/Install# pkgadd -d VirtualBox-4.1.0-SunOS-r73009.pkg
```

The following packages are available:

```
1 SUNVvbox      Oracle VM VirtualBox
  (1386) 4.1.0, REV=2011.07.19.12.47.73009
```

```
Select package(s) you wish to process (or 'all' to process
all packages). (default: all) [?,??,q]: a
```

```
Processing package instance <SUNVvbox> from </home/anton/
```

```
Install/VirtualBox-4.1.0-SunOS-r73009.pkg>
```

```
[...snip...]
```

The following files are being installed with `setuid` and/or `setgid` permissions:

```
/opt/VirtualBox/amd64/VBoxBFE <setuid root>
/opt/VirtualBox/amd64/VBoxHeadless <setuid root>
/opt/VirtualBox/amd64/VBoxNetAdpCt1 <setuid root>
/opt/VirtualBox/amd64/VBoxNetDHCP <setuid root>
/opt/VirtualBox/amd64/VBoxSDL <setuid root>
/opt/VirtualBox/amd64/VirtualBox <setuid root>
Do you want to install these as setuid/setgid files [y,n,?,q] y
```

This package contains scripts which will be executed with super-user permission during the process of installing this package.

```
Do you want to continue with the installation of <SUNVvbox>
```
