

The Dell India R&D Centre team (L to R): Charles, Vijay, Surya, Srivathsa, Gireesha, Narayanan, Ashokan, Jagadeesh, Srinivas, and Divyanshu

restructuring of code, removing deadlocks, and making existing code more efficient.

The Dell India R&D Centre engineers are maintainers for three of the important Fedora packages.

Also, Dell has contributed to open source in various areas like IPMI, systems management and network subsystems. Our contributions are recognised by the community, and are part of major Linux distributions.

Q How can open source enthusiasts secure a job in the open source industry?

Linux and open source offer a wide range of career options to professionals today. Since Linux is widely accepted in global corporate houses and start-ups, there is a tremendous demand for open source professionals across the industry.

Q What are the skillsets that the industry looks for in open source professionals?

RB: Currently, there is a huge demand for open source programmers in the area of cloud computing, virtualisation, multi-core application development, etc. Beyond that, since most hardware devices are supported on Linux, there will always be a great demand for device-driver developers and kernel programmers.

DV: Open source enthusiasts can secure their career in the industry by making code and other contributions to open source projects, such as Linux kernel development, Open Cloud, and open source virtualisation. This will help in making the industry confident of their technical skills and maturity to deliver industry-standard work.

Q How does Dell India R&D Centre reach out to the academia in India?

RB: We have a well-structured programme to build relationships with a few of the top institutes in the country. The programme allows one of the directors to sponsor the relationship, and nurture it through various activities including training the faculty, student internships at Dell premises, conducting workshops, guest lectures, etc.

There is a keen interest to sponsor research projects of common interest, depending on the faculty member's area of research. Apart from this, Dell also recruits from selected top institutes, through its campus recruitment programme.

Recently, the Linux team from Dell India conducted a workshop for 70 faculty members from more than 15 colleges. **END**
