

YOU SAID IT

Request for articles on network monitoring tools

I have been a regular reader of *LFY* since November 2008. I like the magazine very much. In every edition, your team delivers very good content, which I think is extremely helpful for systems admins, developers, programmers, and so on.

I would like to request some articles on monitoring tools such as Nagios, which should cover the details (ideally, in a series) on topics such as how to install and configure a network monitoring tool on Linux, how to monitor the nodes, switches, printers, servers, etc, using these tools.

—Anant Kumar,
ananthkadalur@gmail.com

ED: Thanks for writing to us. We are happy to know that you like the magazine so much.

As regards your suggestion to publish articles on monitoring tools, I request you to refer to the following link that carries an elaborate article on Nagios (<http://www.linuxforu.com/how-to/security/the-perfect-prefect/>).

The last edition of *LFY* was an 'Admins' Special', and had some interesting articles on network monitoring and back-up tools. In the future too, our attempt will be to include articles that are of interest and relevance to all segments of our readers, comprising developers, systems admins, IT pros, newbies, and FOSS enthusiasts.

Do keep reading *LFY* and sharing your valuable feedback with us.

Kudos for the September edition of *LFY*

I am currently working as an assistant systems engineer (trainee) in TCS at Coimbatore, Tamil Nadu. I got to know about *LINUX For You*, recently.

The September 2011 edition of the magazine was just the second copy of *LFY* that I have read so far.

I must say, I found all the articles quite interesting, informative and useful. My only regret is that I got introduced to the magazine so late!

Some of the articles featured in the September 2011 edition of *LFY*, which I found extremely interesting, include: The Comprehensive LAMP Guide, Kernel-Space-Debuggers in Linux, Securing Apache and Creating Your Own Server. However, all these articles are parts of different article series.

Is there any way you could provide me with the earlier articles?

—Ranganath Kulkarni,
ranganath.kulkarni@gmail.com

ED: It's been an absolute pleasure to read your note.

It is, indeed, wonderful to know that you found the content of the magazine interesting as well as informative. Your words of appreciation for some of the articles published in the September 2011 edition of *LFY* are motivating and we will share your feedback with the authors too.

Regarding the earlier articles in the series, you can read most of them online at linuxforu.com... just search for the author's name, or the series name.

If you have difficulties in locating any, please let us know and we will assist you.

However, if you want to buy any specific older edition of the magazine, kindly write to us at support@efyindia.com

Do let us know if you have any other query and please do keep reading *LFY*.

We promise to continue offering the best of informative and engaging content to our readers, in the future too.

Request for articles on virtualisation solutions for SMEs

I was waiting for a comparative study to arrive at the perfect virtualisation platform available in market. Your article, 'Finding Virtualisation Software That Fits', published in the September 2011 edition of *LFY*, answered most of my queries. Please keep up the good work! My best wishes for the entire *LFY* team!

Earlier, I too had done some research on the subject and found a few other virtualisation solutions, which can be good starting points for SMBs and SMEs. I would love to hear more about these technologies. I found that these solutions can help companies save on the licensing costs that they would otherwise have to shell out when they opt for proprietary solutions. I hope to see an article on such solutions in one of the future editions of *LFY*.

I have a suggestion to make as well. Please make available all the software, which are bundled as part of the *LFY* DVD, as easily downloadable ISOs. This would help reduce a lot of e-waste.

—Amruth Kumar Sala,
amruth@srivishnu.edu.in

ED: We are thrilled to know that you found the cover story feature on virtualisation platforms, useful. We will pass on your words of appreciation to the author too

Regarding other virtualisation solutions suited for small businesses, we will try to include an article on the topic in one of the forthcoming editions.

About your suggestion to provide distros as downloadable ISOs, we bundle the distros in the *LFY* DVD for the benefit of those readers (who are quite a few in number), who either have
