

Innovation through science will help IT industry excel: Dr Vijay Bhatkar

“Focusing on the research and development of highly innovative ideas, as well as the solutions designed from such innovations is what will help IT companies in today's world to succeed,” said Dr Vijay Bhatkar, a renowned scientist and a leader in the Indian IT industry, during the inauguration of the extended data centre at ESDS Software Solution Pvt Ltd in Nashik.

Dr Bhatkar inaugurated the centre and the event also marked the launch of two pioneering IT solutions from ESDS: the cross-platform Disaster Recovery-as-a-Service, and eMagic - the data centre management suite.

In his speech, Dr Bhatkar highlighted the exponential growth of the Indian Information and Communications Technology (ICT) industry over the last two decades, from Rs 1 billion in 1976 to a whopping Rs 8000 billion this year. He further added that the ICT industry currently contributes around 10 per cent to the total national income, and this is expected to grow to 25 per cent by the years 2020-25. India has been providing great services to the world, but the time has now come to develop innovative products like the eNLight Cloud, eMagic and the cross-platform Disaster Recovery-as-a-service solutions in order to start competing with the world.

The IT industry was expected to grow beyond the major IT hubs like Bengaluru, Pune, Mumbai and Hyderabad but the growth hasn't reached the smaller cities of India, and in this context, the success of ESDS is ground breaking and pioneering. ESDS has shown to the world that innovative products can be developed by smaller teams through dedication, innovation and hard work. The Indian IT industry should expand outside India through acquisitions and that's what ESDS has done, which is another major achievement. Dr Bhatkar said, “We are in the age of Innovation and one innovation can create wealth equivalent to a nation's wealth.” There are very few organisations in IT today that have a major focus on R&D, and hence Dr Bhatkar felt that firms like ESDS stand a very good chance of collaborating with government agencies to further increase the benefits of innovations in IT.

ESDS has been providing hosting and data centre services to companies across the globe, as a result of its consistency, sincere efforts and innovation. With a modest team of around 30 R&D professionals, ESDS has been at the forefront of innovation since its inception offering managed hosting services, managed data centres, virtualisation services, the eNLight Cloud followed by the recent launch of eMagic and the cross-platform DR solution.

The development of eNLight was an important milestone in the cloud computing industry, and so is the launch of eMagic and the cross-platform DR solution. Dr Bhatkar mentioned that managing various components of a data centre and its overall

operations is a highly complex task. Several organisations are hosting ESDS' solutions, systems and business portals in the data centre, which needs to be managed extremely efficiently to ensure uptime. He congratulated ESDS for focusing on R&D to develop innovative products, which he felt is the need of today's IT industry. Speaking about the difficulties in cross-platform DR implementations, he was all praises for the ESDS team for inventing such a wonderful solution.

ESDS has shown the way to the country and has a long way to go to compete with global organisations through innovations and sustained efforts and Dr Bhatkar indicated that the company has the resources and zeal to be able to do so.

Piyush Somani, MD and CEO, ESDS Software Solution Pvt Ltd, provided an overview of the two products that were launched during this event. He said, “The offerings launched today are aimed at further extending services to our end customers and client organisations. eMagic consists of an algorithm to tackle malware and hacking attempts, which is hard to find in the popular data centre management suites in the market. The cross-platform DR solution based on eNLight Cloud alleviates the need to have exactly similar hardware at the DR site, which results in huge savings, further enhanced by the inherent features of eNLight like auto-scaling, pay-as-you-consume, scaling without reboot, etc.” The sustained work and dedication of ESDS employees multiplies their efforts tenfold ensuring that the company continues to offer the world with innovative products every year.

The teams behind the development of eMagic and the cross-platform DR solution, which included Narendra Bhole, Anil Chandaliya, Vivek Kharpude, Vikash Kumar, and Pravin Sonawane were felicitated by Dr Bhatkar. The winners of the 'CSI Young IT Professional' award, Rushikesh Jadhav and Hussain Dahodwala, were also felicitated on this occasion. **END**
