Deepak Mali:

I am trying to install Ubuntu besides Windows 7, using unetbootin(usb), but I am getting stuck. Can someone help me please?

Like · comment

Shivam Gupta: Yes, sometimes unetbootin doesn't create a bootable usb. Rather you can choose to install it side by side with Windows, with the help of wubi.exe or just try LiLi linux live USB creator.

Deepak Mali: Thanks for the reply. It has created a bootable USB. I could boot ubuntu. I selected the partition, set it to Ext4 journaling File System and clicked on install. Now it is showing that some internal error has occurred.

Shivam Gupta: I think that it has not created the USB properly. Or you are trying to install it in a logical partition rather than the primary one.

Jeet Singh: Always download ISO and do md5sum check. Create the USB with universal usb creator. Try now.

Āyan Don:

Which Linux distribution to use to make my Linux system in Bengali language? Can it be done with Ubuntu also? Please help me.

Like · comment

Shivam Gupta: Try Ubuntu or RedHat, if you haven't installed the same till now. So while installing, you would be prompted to select your language (ubuntu) and in RedHat, you will be led to the addition packages section. In the language section, select your language. Install the language packages and change your language.

Debashish Das: Yes, Go for Ubuntu.

Ganesh Patil: Go for Ubuntu.

Rixwan Ansari:

Does anyone know where I can get Python Console?

Like · comment

Midhun Raj S: Install Python SDK. Just type Python in the terminal. Hope this works.

Suresh Dharavath: Type "Python" without quotes on your terminal and this will help.

Roshesh Thouna II:

I access internet from a USB dongle in my Windows 7 PC. Now I want to share the internet to my Raspberry Pi ethernet port by connecting via ethernet cable. Please help.

Arush Salil: Did you try Sakis 3G?

Roshesh Thouna II: Yes, I tried that. It gives an error message: Failed to connect. I think I need to install ppp, but for that, internet access is required. So I am trying to access net from my PC via ethernet port. I am following the instructions from this blog: <http://shkspr.mobi/blog/2012/07/3g-internet-on-raspberry-pi-success/>.

Naveen Varanasi:

Struggling a lot with my Microsoft Exchange. I cannot add my working Email account because Outlook or Thunderbird is unable to process while Active Sync is unavailable. So any suggestions guys? Don't want to go back to Windows 8 again!!!! presumed Linux is the Best OS and I still believe the same..

Jeet Singh: Did you try Davmail?

Naveen Varanasi: Yeah as per the instructions, I tried that but it's not opening. I mean I can't locate that icon.

Jeet Singh: Ok, you have 12.04. Use this command : `gsettings set com.canonical.Unity.Panel systray-whitelist ["all"]`

Naveen Varanasi: Yeah I did, it is asking me for a value. I will upload the screenshot now. Check that.

Jeet Singh: Do you have all the prerequisites?

Naveen Varanasi: Yes, I do.

Abhishek Das:

I am using Ubuntu 12.0 version...but during the use of my D-Link 3G data card, it is not getting installed. Please help me. How can I install it from the internet?
