

**Vineeth Kartha:**

Dear friends, recently my laptop's (Toshiba L750) touchpad stopped working. I checked the mouse and touchpad settings. Everything seems to be okay. I also tried the xinput --list. Everything looks fine, but touchpad just isn't working. Can anyone help me with a solution, I'm using Ubuntu 12.10?

Sapphire Crystal: Try booting on a USB and see if it is working. If it is still not working, then there is a hardware problem.

Manuel Nunez: Install Gentoo...

Mohammad Abdullah: Add another user and see if it is working in that account or see in the guest account.

Re N Ju: Did you try pointing devices and synaptics?

Yogesh Jadhav: Reinstall Ubuntu.

Rohit Omanwar: Start the terminal and then `sudo modprobe -r psmouse, sudo modprobe psmouse.`

Crystal Aldrich: Does an external mouse work, and if so, rather than it being software issues, maybe it is a hardware issue where the touchpad is concerned. If an external mouse works, I would say the touchpad was physically the issue, and it could be as simple as the tiny connector that attaches it to the motherboard may have slipped off, anyone that has been into a laptop knows the connectors to the motherboard are no where close to be as sturdy as they are with a desktop.

Augustine Lightraiys: It could be a hardware or a software problem. Try reinstalling the linux distribution i.e. Ubuntu. And if it doesn't still work, then it is a hardware problem.

Jonathan Anderson: Generic response to feel important, if so explanation.

Raymond Newman: Stick a Windows 7 disk in the drive. Reboot the computer and follow the prompts on the screen! Just kidding! I got nothing without having the machine in my hands.

**Darrel Leverage:**

Hey friends, need to know whether it's okay to download from Ubuntu 12.10 to 12.04 LTS?

Like · comment

Jeet Singh: Yes... 12.04 is stable and LTS.

Sharad Chhetri: So far I did not have any issue. I am using 12.10.

**Dheeraj Neppalli:**

Dear all, I've been trying trying to download youtube videos for the past 7 days but was stuck with the error `UnboundLocalError: local variable 'url' referenced before assignment` when I was trying to update the youtube-dl using the command `youtube-dl -U`. I've tried to update the system too...but it's showing the following error - `W: GPG error: http://packages.medibuntu.org/ precise InRelease: The following signatures couldn't be verified because the public key is not available: NO_PUBKEY 2EBC26B60C5A2783`. Can someone please help me out?

Jeet Singh: Install the medibuntu-keyring package, and run 'sudo apt-get update'. The other solution is :: see if it works for you- `sudo apt-key adv --keyserver keyserver.ubuntu.com --recv-keys 2EBC26B60C5A2783`. Try medibuntu later, first try the above solution.

Dheeraj Neppalli: I'm using Ubuntu 12.04. Does the above package work for that version?

Jeet Singh: Try : `sudo apt-key adv --keyserver keyserver.ubuntu.com --recv-keys 2EBC26B60C5A2783`.

Dheeraj Neppalli: Thanks..I'm able to update the system but the same error is recurring again when using `sudo youtube-dl -U`.

**Harvey Speckter:**

Hi good people... I am a 12.10 user. My issue is as follows...we use a proxy server. I would like to use the same connection for my terminal and for the synaptic/ubuntu software centre for software updates and or installations, any one to help me - on how i can go about it. The server requires a password and user name - which I have. I have already done so with Firefox.

Jeet Singh: setup proxy in configuration gedit / `etc/apt/apt.conf ::`
example :: Acquire::http::proxy "http://
proxyhost:proxyport";
gedit /etc/environment enter proxy settings ::
export
http_proxy=http://username:password@
proxyhost:port/
export ftp_proxy=http://username:password@
proxyhost:port/ ::
then sudo apt-get update.

Harvey Speckter: See I am a very new user. Okay thanks, got the crux of it. Thanks Jeet.

Simbarashe Lowell Mhlanga: Had the same issue too. Could you kindly explain in simpler terms?

Jeet Singh: No problem, cheers!
