

PHP 5.5 to include open source Zend Optimizer+

If you wish to know what's doing the rounds in the PHP circuit, here's some news

for you. Zeev Suraski, CTO and co-founder of Zend Technologies, announced that PHP logo Zend Optimizer+ will be integrated into PHP 5.5. The opcode cache and code optimiser was recently open sourced; previously it was only available as part of the proprietary Zend Server. According to sources, it enhances the performance of the interpreter by optimising the bytecode generated from PHP source files. It also stores pre-compiled bytecode in shared memory, instead of reloading and recompiling source code from the hard disk when needed.

When it was open sourced, Suraski hoped it would open the way for Zend Optimizer+ to be integrated into the core of PHP 5.5 and filed an RFC to propose that.

Drupal Commons 3.0 released

Developers who are in love with Drupal, the open source content management system, should take note of this. In an effort to boost digital communities and social applications, Acquia, the leading open cloud platform for integrated digital experiences, has released Drupal Commons 3.0.

Most importantly, Drupal Commons is open at its core. It can be easily integrated into every component of the digital marketing ecosystem. Built on Drupal 7, Drupal Commons 3.0 enables digital businesses to achieve breakthrough results with social applications for customer communities, brand advocacy, social commerce and employee collaboration.

Now buy e-books on Google Play in India

If you are hooked onto e-books, then the options are expanding. Google is now offering e-books on its Play Store, in India. The service is pretty similar to what Amazon offers and what Flipkart started recently with its Flyte e-book service.

"Just under one year ago, we introduced Google Play, a digital entertainment hub where you can find, enjoy and share your favourite apps and games on your Android phone or tablet. Today we're adding books to Google Play for people in India. Books on Google Play now offer thousands of Indian titles, from new releases to classics. It's easy to find great Indian authors such as Amish Tripathi, Devdutt Pattanaik and APJ Abdul Kalam, plus international bestsellers from the world's largest ebookstore," Google India noted in a blog post.

Buying an e-book from Google Play is similar to how one buys an app. Users can pay via a credit card, which is already registered with Google Play. Google has also stated that an e-book which has been bought can be read on any device that supports Google e-book.

TeamViewer launches Version 8 for Linux

TeamViewer has announced the launch of Version 8 for Linux users. The software comes after the recent launch of TeamViewer 8 for Windows, Mac and mobile platforms, making TeamViewer 8 available on all platforms.

TeamViewer for Linux version 8 has some new features that make remote administration within companies easier than ever before. Some of the key upgrades introduced in the software include:

24/7 remote access: With TeamViewer 8, Linux computers can be accessed and operated remotely including login, logout and system reboot – making it perfect for server maintenance and home office access.

Session handover: Now, IT support staff members have the opportunity to invite colleagues to an active remote session or even pass the session over completely.

Enhanced session recording: Sound and video can be recorded for perfect documentation and improved online training opportunities.

Comment on sessions for billing documentation: Comments can be entered immediately after closing the remotely controlled session for improved documentation.

Sharing of selected groups with other TeamViewer accounts: It is now easy to share individual groups from the computers' contacts list with the support team, so that all colleagues have quick access on shared client computers.

Central control of TeamViewer user accounts: With TeamViewer version 8, Linux users benefit from the cloud-based TeamViewer Management Console, which has been introduced recently.

Drupal 8 expected to be released by this year-end

After waiting for more than two years, Drupal 8 is finally on its way and according to Dries Buytaert, the creator of Drupal, this will be the open source project's 'boldest release to date'.

According to sources, the latest version of Drupal is due at the end of the year or could be launched the moment it is ready. Drupal 8 will be introduced with changes such as incorporating elements of the Symfony2 Web framework.
