

YOU SAID IT

Help solicited for a bagful of queries

First, let me congratulate you for moving beyond Linux and covering the broader aspects related to open source. So the renaming of the publication from *LINUX For You* to *Open Source For You* clearly seems justified. Well done. I also have a few queries and hope you will be able to help me out.

1. The Fedora 18 operating system that you bundled with the February 2013 issue was amazing but the OS could not be installed. I couldn't figure out what went wrong.
2. I have installed Windows 7, the Centos 6.3 final version and Ubuntu Studio on my Dell laptop. Recently, I installed a lot of software on CentOS and it runs well; but how can I link those applications to my desktop so that I can easily navigate through them? All the applications can be run from my terminal but I cannot be linked to my desktop. If I do try linking it, I get the following error: 'Failed to execute child process—no such directory.' Some help from you would be appreciated.
3. It would be helpful if you started a section on the new software testing and configuration in FOSS.
4. How can I start Android development from scratch? It would be great if you provided some guidance on this subject.

ED: Thanks a lot for the compliments. Such inspiring words help us to do even better. Well, allow us to address your queries one by one.

1. You will have to explain the problem in more detail, along with the error message you are getting.
2. Regarding CentOS, you can get help from the official CentOS forum at <http://www.centos.org/modules/newbb/>. You can even post this query on our Facebook page <https://www.facebook.com/OpenSourceForU>. You will get various suggestions on dealing with the problem, which we are sure will be of great help.
3. We will definitely try to work on and incorporate more articles on testing in our future editions. Keep writing to us and share your feedback as we value our readers' thoughts.
4. You can log on to <http://developer.android.com/index.html>. Here, you will get varied tutorials on Android development and everything you need to get started with it. Hope we have been able to answer your questions. Let us know if you have any other queries.

A career in open source

I have recently started reading your magazine and I like its contents. It's quite interesting and informative. As a third year

student of IT, I wish to make a career in the open source domain. I would appreciate it if you could please tell me what are the hot fields in open source. I am interested in development and coding. And one request—please also bundle a 32-bit Linux OS with your future editions.

—Akshay Mukadam,
mukadam.akshay@gmail.com

ED: Thanks a lot for writing to us! We are indeed glad to know that you wish to make a career in open source. If you are interested in development, you can make a career in Android Apps Development or PHP development. We regularly do a career story in OSFY. You can go through the September and October 2012 issues, in which you will find two articles—one on Android Apps Development as a career and the other on PHP development, respectively. Hope this helps. We have enclosed a 32-bit CD in our March issue.

OSI Days 2012 was informative!

I am an open source enthusiast, and am always looking out for the latest developments around open source. I would like to heartily thank you for organising the OSI Days event (October 12-14th, 2012) in Bengaluru as the event gave a fillip to my 'knowledge bank'. Recently, I played around with the best ever software version control manager—Git, which is being used by Google, Amazon, Microsoft, Twitter, Facebook etc. Many find it difficult switching from the traditional version control systems like SVN, CVS to the most trusted Git—a brainchild of our very famous Linus Torvalds. Git is a comprehensive version control system, and the software industry is switching to it rapidly. To make it easier for the beginners out there and help a bunch of software managers, I would like to write an article on Git for OSFY.

manish.msiclub@gmail.com

ED: We are indeed pleased to know that OSI Days helped boost your knowledge and would like to inform you that the next (10th) edition of Open Source India will be held from November 13-15, 2013 in Bengaluru. Hope to see you there again.

Regarding your idea for an article, we have covered some aspects of Git in our September and October 2012 issues. You can send us a Table of Contents (ToC), highlighting the main features you wish to cover in this article. Once that is approved, you can go ahead with the article. Do continue sharing your opinion with us.
