

```
14: 160960 54235 Phys-irq ide0
15: 39736 0 Phys-irq ide1
```

The types of file systems currently in use are shown by the following commands:

```
[root@sys70 ~]# cat /proc/filesystems
nodev sysfs
nodev rootfs
nodev bdev
nodev proc
```

The partitions in the system can be viewed as shown below:

```
[root@sys70 ~]# cat /proc/partitions
major minor #blocks name
3 0 244198584 hda
3 1 104391 hda1
3 2 244091610 hda2
253 0 240025600 dm-0
253 1 4063232 dm-1
```

If you want more details than what the *free* command gives about memory usage, use the */proc/meminfo* command, which gives a detailed view of the current status of memory and the virtual memory, with *less /proc/meminfo*.

You can see the list of printers installed on the system with the command *less /etc/printcap*.

You can get much more information about *proc* by typing '*man proc*' at the prompt.

Most of the commands do not give an output that is easy to comprehend and also give too many details. The *procinfo* utility can be used instead, which gives all the information gathered from the */proc* directory, presented neatly. The output from this command includes details about the OS, kernel, memory, uptime, interrupts, file systems, etc. The *-a* option shows all information that *procinfo* can find and with the *-f* option, it runs continuously, displaying the information on the full screen.
