

the capability to offer specified bandwidths, affordable high bandwidth designed for businesses that demand superior performance, and more.

Idea Cellular Ltd | Mumbai

Idea offers a range of high-speed mobile broadband devices including Android-based 3G smartphones, dongles, etc. Idea's wide portfolio of services for 3G smartphones offers the latest in 3G applications and high-end data services such as Idea TV, games, social networking, etc, at most affordable prices. Idea's robust pan-India coverage is built on a network of over 100,000 2G and 3G cell sites, spread across over 55,000 towns in India.

Indusind Media and Communication Ltd (IMCL) | Mumbai

Promoted by the Hinduja Group, IMCL is one of the largest MSO and cable broadband service providers in India. The company's cable operations are present across key Indian geographies and it offers high-speed cable broadband services across 11 cities. The company offers high speed Internet services to residential, corporate and SME customers. For corporate and SME customers, IMCL offers dedicated leased lines to enable them to send huge amounts of data. IMCL would also be building a comprehensive services framework that can deliver leading edge voice, video, data and multimedia content services over any broadband or IP-centric network.

Mahanagar Telephone Nigam Ltd | Mumbai

MTNL is presently offering a wide spectrum of Internet related services—from dial-up Internet access to broadband Internet access services—in Delhi and Mumbai. Internet related services provided by the company include pre-paid Internet access services, post-paid Internet Express CLI services, Internet telephony services, and Internet services via leased lines.

Netmagic Solutions | Mumbai

Netmagic Bandwidth Services offers customers the benefits of high-performance network architecture, ensuring scalability and maximum uptime and availability. The services include reliable 10 MBps/45 MBps Internet bandwidth through a dedicated leased line, burstability available on premium and advanced plans so that customers can shift gears and manage heavy traffic, built-in redundancy enabled for businesses through access to connectivity from multiple service providers, and more.

RailTel Corp of India | New Delhi

RailTel's enterprise portfolio includes transmission networks, broadband services, data and Internet services. RailTel's MPLS (Multiprotocol Label Switching) data network provides connectivity that meets the industry's standards for consistent, secure and reliable data delivery. IP services are extended through carrier Ethernet access networks at all the RailTel locations, inter-connected to the MPLS-IP CORE network. RailTel provides port speeds of all granularity, and managed customer traffic. It has set up Internet gateways at Mumbai, Delhi and Hyderabad, and provides 'Instantaneous Bandwidth' leased lines from RailTel PoPs across the country. The IBW is sourced from two or more service providers and on different submarine cables to ensure high availability with low latency.

Reliance Communications Infrastructure Ltd | Mumbai

Reliance broadband Internet services are based on dual ring fibre architecture with FTTB (Fiber-to-the-building), giving exceptional uptime and access speeds. Combined with a wholly-owned 10 Gbps data backbone that is monitored 24x7x365, this gives the customer an extremely reliable service, backed by industry leading service level agreements (SLAs). Reliance Wirefree Internet offers a superior broadband experience and unmatched features like capex-free subscription-based services, complete network and PC security solutions, ease of management for services subscribed to over the Web, and round-the-clock help-desks for support. In short, it is a one-stop solution for all communication and IT needs.
