

After becoming the first network in India to be IPv6 enabled, the third largest IP VPN services provider in India, and an industry-defining portal, in 1999, Sify became the first Indian ICT company to be listed on NASDAQ. Sify broadband offers home broadband plans with speeds from 192 Kbps to 1 Mbps. It comes with a contention ratio of less than 30 to deliver consistent browsing speeds. The company has a presence in more than 200 cities across India, so customers can transfer their Sify broadband connections in case of relocation. Sify broadband also doubles up as a provider of an array of business enhancement tools such as website building, domain names, static IP etc, to empower customers' businesses. Subscribers can enjoy a host of custom solutions, which include uninterrupted connectivity, dedicated speeds, value added features and 24x7/365 support.

Spectranet Wireless Broadband eliminates the ugly wiring that usually accompanies a broadband connection. The service gets delivered effortlessly—or wirelessly—to homes at a low cost. Its services include unlimited download/upload on all plans, quick installation (within two days), the ability to surf the Internet on Wi-Fi enabled mobiles, free Internet access at all Spectranet Wi-Fi Zones across the country, hassle-free 24x7 customer support, and numerous value-added services for the entire family.

Tata Communications can deploy Easy Internet in less than 10 days, managing both the Internet port and local loop set-up. Backed by best-in-class Service Level Agreements (SLAs), Easy Internet is robust and dependable, with 99 per cent guaranteed network uptime. Flexible service offerings and additional options include business class Internet bandwidth available in 256 Kbps, 512 Kbps, 1 Mbps and 2 Mbps plans; best-in-class Managed Security Services with a firewall; Intrusion Detection and Prevention (IDPS) and anti-spam/anti-virus devices; a choice of routers and additional options: business messaging, management of routers and utilisation reports. It provides connectivity to over 50 per cent of the Indian market, and its tier-1 IP backbone spans more than 200 countries and territories, providing coverage across five continents.

Tikona Digital Networks (TDN) is engaged in building the next generation of wireless broadband services for home and enterprise customers in India. Tikona Enterprise Solutions offers the following products and services to businesses—direct to office leased lines with near 100 per cent Internet uptime, with link load balancing and failover routing; differential access—for customised bandwidth per user group; secured office Wi-Fi—which allows employees to work from anywhere in the office using devices such as tablets, notebooks, smartphones, etc; secured boardroom Internet—for easy and secure guest Internet access; high definition (HD) cloud video conferencing services that come with collaboration features. etc.

Tulip's corporate Internet access service offers a flexible and scalable solution, providing reliable, highly available and on-demand bandwidth to customers. It offers tailor-made solutions as per the requirement of the customers. Its features include dual-stack support (IPv4 plus IPv6)-ready networks, fully meshed DS3/STM backbone networks, carrier agnostic networks with Internet connectivity from multiple network operators, no single point of failure and a fully redundant network, last mile access via fibre or radio frequency, a wide choice of bandwidths ranging from 64 Kbps to STMs, multiple interface options (i.e., G.703, V.35 or Ethernet), industry leading SLAs, and 24/7 monitoring via multiple network operation centres.
