

Linux kernel 3.10 also offers interfaces that can help in controlling the Unified Video Decoder (UVD) portion of AMD graphics processing units (APUs). UVD was previously available only for the use of AMD's closed-source proprietary driver — but the new kernel will also have an open source driver to shunt video through UVD. Linux Kernel 3.10 even has support for AMD's latest Richland APUs.

Developers find Firefox OS most compelling: Survey

Android and iOS are no more the centre of attention! With so many new smartphone operating systems being announced, it is evident that developers are shifting focus (and interest) to the newer platforms that can possibly shake up the stranglehold that Android and iOS have on the market. According to a survey, developers view Firefox OS as the most promising and compelling among the new OSs announced, like Tizen and BlackBerry 10.

This finding emerged in the course of a survey conducted by IDC and cross-platform tool vendor Appcelerator. Almost 6,046 Appcelerator Titanium developers were questioned as part of this survey. Developers were asked how they viewed Firefox OS, Tizen and Ubuntu. Of these, the Firefox OS won hands down!

Michael King, director of enterprise strategy at Appcelerator said, "I was down in Brazil about a month ago and there was massive interest in Firefox OS. Everybody came to talk to me about Firefox OS."

Out of all the participants, around 25 per cent said they were interested in Firefox OS, 19 per cent voted for Ubuntu OS and 9 per cent showed interest in Tizen OS.

Linux Mint 16 'Petra' set for November release

Clement Lefebvre, the head developer of Linux Mint, has announced that the next version of the distribution will be code-named Petra and it is scheduled to be released at the end of November this year. The 19th release of the distribution, Linux Mint 16, will be based on Ubuntu 13.10, and the developers are planning to publish editions with the Cinnamon, MATE, KDE and Xfce desktops.

In the meantime, the Linux Mint project has also made release candidates available for the KDE and Xfce editions of Linux Mint 15, which is code-named Olivia. Like the main edition of Linux Mint 15, which was published at the end of May, these are based on Ubuntu 13.04 and use version 3.8 of the Linux kernel.

A palm-sized Linux-ready computer

Here comes another Linux-ready computer for enthusiasts! Artila Electronics has announced the release of Matrix-505 ARM9, which is powered by an Atmel AT91SAM9G45 400MHz SoC, 128MB DDR2 SDRAM and 128 NAND Flash with Linux 2.6.38 pre-installed.

A fault resilient booting function is implemented by using a backup Linux file system in the DataFlash, which boots up Matrix-505 automatically in case the primary NAND Flash fails. The Matrix-505 integrates two 10/100 Mbps Ethernet, four high-speed RS-232/485 serial ports, two USB hosts and a microSD socket into a palm-sized metal box. The DIN-Rail and wall-mounting capabilities also make Matrix-505's onsite installation flexible, the press release states.

The Matrix-505 has been designed with simplicity
