

- Choose your operating system: The operating system you select will have an effect on the functionality and applications that the smartphone runs. We would recommend that you go in for the Android OS as it has outflanked all other operating systems when it comes to the quantity and quality of apps that it offers. Besides, its OS is more customisable than the others.
- Check out the screen size and resolution: The average screen size of smartphones is getting bigger by the day as vendors are offering many sizes to lure a wide variety of consumers. Look for a screen size that fits your requirement, but as of now, we would suggest that you avoid a smartphone that has a screen size less than 10.16 cm (4 inch). A good screen size enhances the user experience. The screen must have a good resolution – the higher the resolution, the better the clarity. Don't forget to check the screen brightness both indoors and outdoors to ensure the screen is visible even in the sunlight. Also check the PPI (pixels per inch). The screen resolution, PPI and brightness are of paramount importance.
- Go for a good processor: While on the move, you should look for a smartphone that is high on speed so that you enjoy a good user experience. And this comes with a good processor. For example, a quad-core Qualcomm Snapdragon 600 processor will provide you a lot more speed for gaming and multitasking—which is much more than what a dual core processor offers.
- Memory is also important: You could opt for an Android smartphone that comes with a good memory. Nowadays, 2 GB of RAM has become the order of the day as higher end smartphones have a minimum of 16 GB of storage. If you want to keep your expandability options open, go for a smartphone that is armed with a microSD card slot. And if you are looking to shoot a HD video or plan to download a lot of stuff, be ready to splurge to get 32 GB of memory, especially if the phone doesn't have a card slot.
- Battery life: While on the move, you would definitely need a device that has a good battery life of at least six to seven hours. Don't get impressed by the size of the battery as this does not necessarily translate to great battery back up. Look for special power-saving features that manufacturers may include in the smartphone. We would also recommend that you go for a smartphone with a removable back cover and a battery as most of the devices are now designed to be sealed.
- A camera good enough to serve your needs: If you thought that a camera with a high megapixel count will give you an edge, you are probably off the track. While a 12 MP camera should give you more detail than a 5 MP model, ultimately, the size of the sensor and quality of the lens also matter a lot in determining how great those photos look. So if the camera function is important for your work, try it out and compare the images of different smartphones before making a decision.

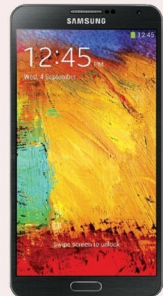

Some Android smartphones to look out for in the market

Samsung Galaxy Note 3

The Samsung Galaxy Note 3 will boost your productivity and help you perform all your day-to-day business tasks. Its innovative features assist on-the-move executives in their busy lives. It has a larger and better screen for the best viewing experience and enables a higher level of multitasking. The introduction of significant S Pen improvements make everyday life easier and faster.

Samsung Galaxy Note 3 comes with a larger 14.47 cm (5.7 inch) full HD Super AMOLED display, yet it is slimmer (8.3 mm) and lighter (168 g), and has a more powerful and longer lasting (3,200 mAh) battery. Equipped with a 13 megapixel rear camera with smart stabilisation and a high CRI LED flash, the Samsung Galaxy Note 3 enables on-the-move executives to crisply capture every important photo, even in low light and active situations. Incorporating the industry's largest 3 GB RAM, the Galaxy Note 3 also ensures a faster and more powerful performance. So if money is not a constraint for you, this smartphone can be a good option.

Price: ₹ 49,000

Specifications:

14.47 cm (5.7-inch) full HD super AMOLED display, 1920 x 1080 pixels screen resolution, runs on Android 4.3, an octa-core processor, a 3,200 mAh battery, 3 GB RAM, 13 MP rear and 2 MP front camera, NFC support, S Pen optimised features like Air Command, Action Memo and Scrapbook.
