

A List Of Network Security Providers

AVG India | Mumbai

With AVG Remote Administration, you can manage your whole business network from one place. Experts have rated the company's remote administration as one of the fastest in the market. So whether you are the IT expert in your business by choice or by default, AVG Remote Administration ensures that your network security does its job without getting in the way of everything else that's on your plate. AVG's Admin widget is a simple tool that sits on your desktop. It immediately alerts you if there are any non-compliant machines and lets you take action with just a couple of clicks.

Brocade | Bengaluru

To help organisations address network security challenges, the Brocade IronShield 360 security architecture combines with leading security products from McAfee to protect a wide range of network environments. Together, Brocade and its security partners enable organisations to deploy and manage secure networks in support of critical services. Combining IronShield 360 protection capabilities with industry-leading security products in the areas of Layer 2 through Layer 7 protection provides a great architecture that enables organisations to focus on their business priorities and attain their goals.

Cisco Systems | Bengaluru

Cisco takes a comprehensive approach to security by integrating security into all parts of the network. Its open source-based offerings include Sourcefire's threat-centric security solutions that range from next-generation IPS and next-generation firewalls to advanced malware protection. Cisco also uses Kvasir – an open source, Web-based application that improves the ability of penetration testers to share and utilise vulnerability data collected by various tools. Through Kvasir, disparate information sources are homogenised into a unified database structure that allows security testers to accurately make appropriate decisions on the next attack steps.

Cyberoam India | Ahmedabad

Cyberoam's network security appliances, available as UTMs and next generation firewalls, deliver enterprise-class network security with stateful inspection firewalls, VPN and IPS, offering the Human Layer 8 identity-based controls and Layer 7 application visibility and controls. Cyberoam ensures high levels of network security, network connectivity, continuous availability and secure remote access with controlled network access to road warriors, telecommuters, partners and customers.

Digital Track Solutions | Chennai

The company offers a myriad of network security solutions like firewalls, VPN, SSL VPN, anti-virus, anti-spam, data leak prevention, two-factor authentication, Web filtering, IPS, application control, Web application firewalls, etc.
