

Fortinet | Bengaluru

Fortinet's family of network security management products includes FortiManager, the centralised security management platform and FortiAnalyzer, the centralised security reporting platform. Built to support FortiGate, FortiWiFi (the wireless security appliances) and other FortiOS-enabled systems, these products allow organisations to keep pace with their constantly evolving IT infrastructure, business requirements and threat landscape.

Fortinet's security management solutions enable fast deployment and configuration of new security devices, and offer organisations a consolidated view of their security position.

Juniper Networks | Bengaluru

Juniper Networks' Junos WebApp Secure is a Web intrusion deception system that does not generate false positives because it uses deceptive tar traps to detect attackers with absolute certainty. Junos WebApp Secure inserts detection points into the code, and creates a random and variable minefield all over the Web application. These detection points allow you to detect attackers during the reconnaissance phase of the attack, before they have successfully established an attack vector.

IBM | Bengaluru

IBM Security Network Intrusion Prevention System appliances are designed to stop constantly evolving threats before they impact your business. This means providing both high levels of protection and performance, while lowering the overall cost and complexity associated with deploying and managing a large number of point solutions.

McAfee Software India | Bengaluru

McAfee Network Security solutions include next-generation firewall security and intrusion prevention, advanced behaviour analytics, and sophisticated threat detection engines, all designed to protect your next-generation networks. Its network security framework provides maximum availability, security, integrity, flexibility, and manageability with minimum overhead and risk. With a proven record in network security protection, McAfee is the partner of choice for the most security-conscious companies and governments worldwide.
