

else it will display the message 'pang'.

```
# riak start
# riak-cs start
# riak ping
# riak-cs ping
```

You can start Riak and Riak CS services on each of your nodes within your cluster. Once done, simply add your node to your cluster using *riak-admin*. You can use *riak-admin* to perform virtually any task on your Riak cluster other than starting and stopping it. Also, do remember to replace the IP address field with one of your node's IP addresses.

```
# riak-admin cluster join dev1@<Node_IP_Address>
```

Now that your cluster is up and running, you can test it out by adding an object (in this case, a simple image file) to it:

```
# curl -XPUT http://<Node_IP_Address>:10018/riak/images/
test_image.png \
-H "Content-type: image/png" \
--data-binary @image_name.jpg
```

You can even install and configure any S3 compatible clients such as *s3cmd* to work with your Riak CS cluster. Type in the following command to install *s3cmd* on your Ubuntu server:

```
# sudo apt-get install s3cmd
```

Basho even provides an intuitive UI that you can use to manage your entire Riak CS cluster. Riak Control (Figure 4) provides users an in-depth view of performance, memory consumption and the uptime status of all the nodes in the cluster. You can even perform node addition and deletion activities using this UI. **END**
