

home. Ensure that the 'Format' checkbox of that partition (Home) is unchecked or you are pouring water into a broken bucket.

- 6) Finish the partitioning and allow the OS to install with your older Home.

**Upgrading the OS with the Home preserved:** This is similar to the above option, 'Sharing the Home between multiple GNU/Linux instances'. Let's see what the changes are. Step 1 and 2 are the same.

- 3) Select 'Manual partitioning', 'Advanced installation' or something like that under 'Where to install your OS?'. If there is an option 'Upgrading your OS with user accounts and files from <your old OS> preserved', that's fine. Then you don't have to perform the subsequent steps.
- 4) Select the / partition of your old GNU/Linux instance and edit it. Set the mount point ('Use as') to / and check 'Format?' checkbox. You can also delete the partition and create a new one instead of editing the old /. Steps 5 and 6 are the same.

## Cloud storage

Cloud computing is a nice way to keep your personal files safe. To put it simply, it is the process of keeping your files in a remote computer with a user name and password. Ubuntu One and Google Drive are some popular cloud service providers.

But it is still recommended that you take and keep the back-ups of you data. 

## Disclaimer

System recovery is a highly dangerous process, if done incorrectly. Readers are strictly recommended not to perform these recovery tricks if they don't face any problems with their file system (these are not some simple experiments). Also, one should read the entire article and choose the correct steps — partial knowledge may damage your system. All these solutions have been successfully tested by the author with his own computer. But the author, publisher and software developers can't guarantee that these tricks will work with any computer. Always try to take back-ups and perform these steps only when you find there is no other way to recover your files.

# Key Questions To Ask About Your Website

- ▶ Does it matter if your website has features that your competitors don't?
- ▶ Does the idea of new customers fit in your business plan?
- ▶ Would it help your business if you got enquiries from other cities and other countries?
- ▶ What is the cost of your (or your team's) time spent in managing a complex website?
- ▶ Where would you like your online showroom to be—somewhere mixed amongst millions of websites OR visible on a popular B2B marketplace?
- ▶ Does a marketplace visited monthly by 20,000 decision makers be a good marketplace for your business?
- ▶ How much would renting a showroom on Lamington Road or Lajpat Rai Market cost you? How does that compare with Rs 1500 per month that you would invest in eleB2B.com?

**eleB2B.com**
