

Justdial

Open Source All the Way

You are looking for a Chinese restaurant in your locality and one of the first things you do to search for it is go online to Justdial. That's the power Justdial has in our lives today, but guess what? Justdial is powered by open source. Believe it or not, the entire platform is based on open source technology for one simple reason... it is indisputably the best.

Diksha P Gupta from *Open Source For You* spoke to **Sandipan Chattopadhyay, CTO, Justdial**, on how things work in the company.

Most of the companies we have spoken to use open source technology because it cuts costs. Justdial is a little different. This firm uses open source technology because it allows the team members to unleash their creativity and work to their satisfaction. Sandipan Chattopadhyay, the man behind the open source movement at Justdial, introduced the technology to the company at a point when those at the helm wanted to upgrade and modernise the IT set-up. Please re-read that: They wanted to upgrade and modernise, *so they switched to open source technology!* Sandipan has been associated with Justdial for

about seven and a half years. He remembers, "When I joined, the Justdial management was looking at modernisation and were exploring technology options. I pitched in with the open source idea and that's how it all started. We also made the website then."

Open source all the way

But why open source? Possibly because that's the only thing Sandipan knew, perfectly. He says, "I wanted open source technology because it was the perfect thing for a company like Justdial. There was no benchmark for this kind of
