

“Lava Offers Official Rooting Support To Its Devices”

Lava became a popular name with its Xolo series of devices. Recently, the company showcased its Tegra Note tablet at Open Source India 2013. This was the first time that India got a glimpse of the device. Lava is positioning Xolo very strategically, while at the same time, not ignoring its other line of products. **Diksha P Gupta** from *Open Source For You* spoke to **Sachin D Naik, head, Product Development, Xolo, Lava International Ltd**, about the company's strategy for its Android devices. Read on...

Q You showcased the NVIDIA Tegra 4 based Xolo Tegra Note device at the recently concluded Open Source India 2013. What is the device all about?

Xolo Tegra Note is the first device powered by the Tegra 4 processor. The tablet will be officially launched in the first week of December 2013. It will come with a Cortex A15 quad core CPU together with the 72-core GeForce GPU.

The Xolo Tegra Note will sport a 17.78-cm (7-inch) HD IPS LCD touchscreen display. The tablet will have 1GB RAM and 16 GB internal memory which can be further expanded to 32GB via a microSD slot. It also packs a 5-megapixel rear camera and a VGA front-facing camera. The tablet comes with HD audio stereo speakers in the front, with a bass-reflex port. It can give up to 10 hours of HD video playback. The tablet will be priced at Rs 17,000. One unique proposition that the Xolo Tegra Note tablet will offer is the stylus. With it, users will be able to write on the device. It will come pre-bundled with TegraZone, which has some graphics-intensive games, specifically written for Tegra devices. This device is going to be a delight for gaming freaks.

“Yes, Android is undoubtedly the most popular operating system. One of the reasons for its popularity is the eco-system it comes with. Users get apps for almost everything on Android. Also, it is easy to use and has become the norm in the smart phones business.”

Q Is this device designed in India?

No, it is not an Indian device, per se. We have partnered with NVIDIA to design this device. It is the result of brilliance from Xolo and NVIDIA, together.

Q Was there a reason to partner with NVIDIA for this device?

If you look at NVIDIA's history, it has been a frontrunner in terms of the gaming and speed experience that its chipsets offer. Its graphics cards are
