

DVD OF THE MONTH

Fedora 20

Fedora 20, code named Heisenbug, is a fast, stable and powerful Linux-based operating system with a collection of software. You are completely free to use, study and share this operating system. It can be used along with or as a replacement for other commonly used operating systems on your desktop/laptop or servers. Fedora is the foundation for Red Hat Enterprise Linux, a powerful enterprise OS. It is built by a global community of contributors.

- 1 Fedora 20 (a.k.a. Heisenbug) with GNOME 3.10
- 2 Search bar of GNOME 3.10
- 3 Fedora 20's software application for installing apps

Minimum Systems Requirements

The following configuration is what is recommended for the default installation of Fedora 20. Systems requirements may differ depending on the purpose for which the system is going to be used.

- 1 GHz or faster processor
- 1 GB system memory
- 10 GB unallocated drive space
- Graphical installation of Fedora 20 requires a minimum screen resolution of 800 x 600 pixels.
