Xmart Xherry: Can any one give me the link to download the Linux flavours?

Like · comment

Anand Kethavarapu: Buy OSFY. You will surely get to try your hands on the Linux flavours every month.

Yogesh Jadhav: You can check out this link. I am sure this will help. <http://www.linux.com/directory/Distributions/enterprise>.

Sainath Deshpande: How to install Ubuntu or any other Linux distro using a pendrive? I have an ISO file. Please help.

Like · comment

Yogesh Jadhav: Try out this link: `dd if=/dev/sdX of=/path/to/yourlinuxdistro.iso (sdX=X means your usb drive stick. e.g. /dev/sdb1)`.

Rahul Ghose: Check out UNetbootin at <http://unetbootin.sourceforge.net/>. UNetbootin allows you to create bootable Live USB drives for Ubuntu, Fedora, and other Linux distributions without burning a CD. It runs on Windows, Linux, and Mac OS X. You can either let UNetbootin download one of the many distributions supported out-of-the-box for you, or supply your own Linux .iso file if you've already downloaded one or your preferred distribution isn't on the list.

Er Alex Mercer: I am currently on Ubuntu 13.04. I have worked with Linux for a few years. I have bunch of Bz2 files that I need to install. I searched online and ended up getting confused. I could not install it. Can you tell me why the installation of Linux is not so easy like Windows? And can you suggest me an easy way to install these packages?

Like · comment

Anand Kethavarapu: Use `sudo bzip2 -d <[bz2 file]` at command prompt to explore the software. Then follow the installation instructions.

Cherif Kousoum: I want to install Wireshark on Backtrack. Can you let me know the steps to follow?

Like · comment

Anand Kethavarapu: Cherif, Please try to install in the following way. Hope this helps.
#sudo apt-get update
#sudo apt-get install wireshark

Subin M Thevalakkattu: I was trying to install Ubuntu 13 on my laptop. But the HDD drives are showing only one single volume. My HDD is actually 500 GB. I have three partitions in Windows. But I tried to install Linux and it showed only 500 GB single drive. How can I install Ubuntu in my system? Please help.

Like · comment

Rahul Ghose: Try parted.

Arun Sharma: Don't you use Ubuntu WUBI, and install Ubuntu Inside Windows. There is some Problem with the new version of WUBI. So my advice is to install 12.04.1 <http://old-releases.ubuntu.com/releases/12.04.1/>. Download Ubuntu 12.04.1 Desktop version and use its WUBI to install. Let's hope things will be fine at your end.

Pankaj Tiwar: I am Engineering student and I have decided to go for on Linux. So, which distro should I start with and I have following requirements:

1. Good visual effects
2. No tough installations
3. Dual boot with windows
4. No issue with out of box WiFi set up (Heard that Ubuntu 13.10 has some)

I came to know that Redhat and Fedora have some issues with touchpad. Please guide me

Shivam Sharma: I think you should try Linux Mint for the best graphical effects or go for Ubuntu.

Shashank Jyoti Yadav: I think Ubuntu is the best, even Fedora 10 is good.

Rahul Ghose: You can try Scientific Linux.

Anand Kethavarapu: You can even try Fedora 19 or CentOS 6.3 (which is free to download) and handles support issues too.

Pankaj Tiwar: Thanks Anand. Do these work well on laptops too?

Anand Kethavarapu: Yes, they are up and running!
