

Red Hat announces Enterprise Linux 6.5

Red Hat has announced the release of the newest version of its operating system, Red Hat Enterprise Linux (RHEL) 6.5. A firm, Raleigh, said that RHEL 6 line is "... designed for those who build and manage large, complex IT projects, especially enterprises that require an open hybrid cloud. From security and networking to virtualisation, Red Hat Enterprise Linux 6.5 provides the capabilities needed to manage these environments."

The new version is bundled with tools that help in faster tuning of the system to run SAP applications.

Jim Totton, VP and general manager of the Platform Business Unit, Red Hat, said in a statement, "Red Hat Enterprise Linux 6.5 provides the innovation expected from the industry's leading enterprise Linux operating system, while also delivering a mature platform for business operations, be it standardising operating environments or supporting critical applications. The newest version of RHEL 6 forms the building blocks of the entire Red Hat portfolio, including OpenShift and OpenStack, making it a perfect foundation for enterprises looking to explore the open hybrid cloud."

A game for Linux lovers

The Humble Jumbo bundle for Linux gamers is now available. According to reports, the bundle comes with three big name gaming titles for Linux gamers. These include the games Natural Selection 2, Garry's Mod and Serious Sam 3: BFE. The bad news though is that the gaming titles on offer on the jumbo bundle are not available for every platform.

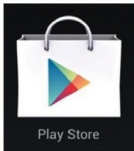

There are three other titles included in the jumbo bundle. These include Sanctum 2, Magicka (with DLC) and Orcs Must Die! 2: Complete Pack. These three titles, though, are available for Windows only. That said, gamers can still redeem them on Valve's Steam.

Google Play Store updated with new UI, features

A new version of the Google Play Store has reportedly started rolling out. According to a report, the new version, 4.5.10, has been updated by the search giant, with the addition of a number of new features to the operating system. It also brings a number of tweaks to the user interface of the application.

The biggest change to the Play Store's new version is the Activity Feed. This shows what the user has done on Google Play and also adds +1s and reviews to the listings. In addition, the Play Store 4.5.10 comes with the in-app purchases indicator, which shows whether an app listed on the Play Store has any in-app purchases or not.

The update also makes changes to Google Play's user interface. The changes, though, are quite minor, according to reports. The over-the-air updates have started rolling out, so it should come to every user automatically soon.

CyanogenMod version 11.0 M1 ROM (based on KitKat) released

The Android KitKat version of Cyanogen Inc's CyanogenMod 11.0 M1 ROM has been released. According to reports, the ROM has currently been released for a select few Nexus devices only. These include the Nexus 4 and Nexus 5 smartphones and the Nexus 10 tablet, along with all the editions of the Nexus 7
