

future as well. He created the ideal atmosphere for the discussions to follow. We caught up with him after his talk and he animatedly told us, "I was here at OSI 2012 as well. I can see the show has evolved with respect to its audience this year, as compared to the last year. Frankly, I did not expect so many questions coming my way after I was done with the session. I had a couple of engaging discussions even after the talk. This clearly speaks for the kind of serious audience that is present at the show."

After the inaugural address, the audience got split between the two parallel tracks—one dedicated to mobile app development and the other to 'FOSS for Everyone'. The core focus of the mobile app development track was on Android, as speakers shared their expertise on the domain through various topics. The highlight of the 'FOSS for Everyone' track was the session by Lux Rao, CTO, HP - Technological Services, India, who shared his insight on 'The New Style of IT'. The session was highly interactive with a number of questions put forward by the vibrant audience. And Rao was quick to answer all of them. When we caught up with him after his talk, he said, "This is my second year of participation at Open Source India. It is an interesting event where we get the right kind of audiences to interact with. I have thoroughly enjoyed being at the show."

For the first time in the history of Open Source India, two companies—Cleartrip.com and Atul Ltd—shared their success stories about how FOSS helped them optimise their IT budgets and break free from vendor lock-in.

Next up was a panel discussion on the topic 'How Important is Certification for Recruitment' and we must say, this generated a lot of heat!

Day 2: Packed with more information, and even more energy

The second day was dedicated to tracks on IT management, the cloud and Web app development. We saw participation from IT managers and developers who came over to hear some of the great stalwarts in the tech industry speak. The day kicked off with Tristan Goode, CEO, Aptira and a member of the board of directors for the OpenStack Foundation, sharing his insights on 'Getting Started with OpenStack Development'. The

audience threw numerous questions at him and he handled these with aplomb, putting to rest their concerns.

The day also saw Venkatesh Swaminathan, country manager, The Attachmate Group, sharing his thoughts on 'When The Cloud Will Rain \$, \$, \$...' and the enthusiastic audience listened in rapt attention. Sandipan Chattopadhyay, CTO, JustDial, who made his presence felt at the event, spoke on the 'Modern Day Challenges in Web Development'.

The day was also laced with a lot of networking sessions and it was great to see the industry experts bonding over conversations. Dr Rajeev Papneja, COO, ESDS Software Solution Pvt Ltd, said, "I had an enriching experience at OSI 2013. This is one occasion at which we get to meet both the makers and consumers of technology. OSI proved to be the real problem-solver for me. Our team was struggling with an issue that it encountered while running Windows virtual machines on the Zen cloud. We were trying to fix this for over a year but we couldn't get the perfect solution. I brought this issue up with Dr K Y Srinivasan, principal architect, Windows Server and Cloud Division, Microsoft, when I met him at OSI 2013 and he suggested a possible solution within minutes. If we could have more of such interactions formally organised by the OSI team, it would be very helpful."

Day 3: High on kernel development and database management

After two days of information-packed sessions, the third and last day was dedicated to kernel and database lovers. The day kicked off with Dr K Y Srinivasan, principal architect, Windows Server and Cloud Division-Microsoft Corporation Redmond, Washington, talking on 'Running And Managing Linux On Hyper-V'. When we caught up with him later, he enthused, "I was a speaker at OSI 2011 as well. Coming to this year's edition was a good experience and I can see how the show has grown from 2011 as well. One suggestion that I would like to give to the organisers is that they should introduce a rating system for the speakers. The audience should be able to rate a particular speaker on the basis of what they could draw from the talk and other similar aspects. If this is done, the quality of talks will improve in a big way."
