

Database lovers enjoyed the interactive session with Sanjay Manwani, director, Oracle India, who spoke at length on the topic 'The State of the Dolphin-Oracle's MySQL strategy and the latest key developments'.

Hands-on workshops galore!

The attendees got a chance to delve deeper into the latest trends in the open source arena though a varied range of workshops that spanned the three days of the event. From workshops on Android app development and developing

games in HTML5, to creating a great digital experience with Drupal in just three hours, the event had it all. Jacob Singh, regional director, Acquia India, said, "Drupal is a fascinating technology, which is why, I, for sure, get a lot of attention at OSI 2013. This is the reason why I have been participating in OSI, year after year. Both my session and the workshop were awesome and really well received. I plan to be here next year as well." And we must admit that the workshops garnered a lot of attention from FOSS lovers.

Business opportunities

The three-day convention generated a lot of business opportunities for our partners who came forward to support the event. Rohit Rai, director, Sales, MongoDB Inc, enthused, "I have seen OSI growing bigger and better with every edition. This year, I came with MongoDB, which is a new entrant in the Indian market. Although we are an established name, as a company, we are fairly new to India. OSI 2013 not only provided us the appropriate platform to network with our clients but also helped us generate some quality leads."

Amar Chigteri, manager, Sales - West and South India, EnterpriseDB, felt that Open Source India 2013 was an improved avatar compared to its previous editions. He said, "While the footfalls were comparatively lower than last year, possibly because of the event running on weekdays, the quality of people attending the event has improved manifold. There were serious visitors and some real business leads coming in for us. The kind of technical sessions and workshops that were organised in the show took it to another level altogether."

Manish Gupta, general manager, Liferay India, who made his debut at the event, said, "This is our first time at Open Source India. We came here with the idea of creating a buzz about our product and the company, within the community and in the corporate sector. I was happy to see the kind of audience that turned up at the show. We had some serious visitors and good enquiries coming in. With the kind of turnout we had, I can say that OSI is one of the finest events bridging the gap between the community and the corporate sector."

Arati Bam, head marketing, The Attachmate Group, said, "Although this is our first year of being present as an exhibitor at Open Source India, we have been associated with the magazine *Open Source For You* in the past as well. As expected, the show has been wonderfully organised and a complete delight for the exhibitors. Apart from the fact that we have been able to generate some quality business leads, our interaction with the community was pretty fruitful and engaging."

Celebrating the spirit of FOSS as always, you can expect OSI Days to be back with greater enthusiasm and more information-packed sessions next year. **END**
