

GAE vs Amazon Ec2

	GAE	Description
Provider	Google	AWS
Service model	PaaS	IaaS
Auto scaling	Yes	Yes
Network availability	99.999%	99.99%
Load balancing	Yes [Extra charge]	Yes [Free]
Programming language supported	APL Java PHP Python Ruby WinDev	Java Python
Free tier	Free of cost for limited usage and trial	Free tier for 1 year. User needs to provide credit card details
Flexibility	Less, considering PaaS	More, considering IaaS

Now just open `http://localhost:8888` in the browser. Click on **GAETest** to run it in the local environment. Deploy **Sample Hello, Open Source For You Web** application on GAE.

To deploy it on GAE, authentication is required. Provide your username and password in a new window. Accept the terms of service and privacy policies. If the application ID is not set, the deployment process will give an error: "GAETest does not have an application ID." To create an application ID, open <https://appengine.google.com> log in and select **Create New Application ID**.

Click on **Create Application**. It will give the message: 'Application Registered Successfully' if all goes well. To proceed further, click on the project settings link in the same dialogue box.

Click OK and the application ID error will be solved. Now click on **Deploy**.

Once the deployment process is complete, the console output will be as shown below:

```
----- Deploying frontend -----
```

Preparing to deploy:

```
Created staging directory at: 'C:\Users\admin\
AppData\Local\Temp\appcfg1977774409461224969.tmp'
Scanning for jsp files.
Scanning files on local disk.
Initiating update.
```

Figure 11: Application status in the GAE dashboard

Figure 12: Available servlets for an app in GAE

```
Cloning 2 static files.
Cloning 23 application files.
Deploying:
  Uploading 3 files.
  Uploaded 1 files.
  Uploaded 2 files.
  Uploaded 3 files.
  Initializing precompilation...
  Sending batch containing 3 file(s) totaling 4KB.
  Deploying new version.
  Closing update: new version is ready to start serving.
  Uploading index definitions.
```

Deployment completed successfully

Now, let's verify the GAE dashboard and verify the status of the newly deployed application, as shown in Figure 11.

Let's run the application as shown in Figure 12. **END**
