```

There are a few more settings to make your Vim experience more enriching.

Clear off the search highlights: This helps to clear off the search highlights. Just hit the F3 key when you want to disable the highlight. Hit it once again to turn it on. Just add the following code to your *_vimrc* file:

```
"Press <F3> to disable/enable search highlight
nnoremap <F3> :set hlsearch!<CR>
```

You might want to disable the movement of arrows while using the *Normal* or *Insert* mode. Here are the *_vimrc* settings to do that. Comment it out if you don't like it or remove it; that's up to you.

```
"Disable arrows keys.
Inoremap  <Up> <NOP>
inoremap  <Down>  <NOP>
inoremap  <Left>  <NOP>
inoremap  <Right>  <NOP>
noremap  <Up>   <NOP>
noremap  <Down>  <NOP>
noremap  <Left>  <NOP>
noremap  <Right> <NOP>
```

Need the current line background highlighted? No issues. Just stick 'set cul' somewhere in the *_vimrc* and it will highlight the line the cursor currently is at. Here's my _vimrc file. Its got all the settings given here in this article-*https://github.com/pmugit/osfygvim/blob/master/_vimrc* Go ahead and use it in case the options you added by hand don't work. That's all for now. END
