Kickstart file architecture

Kickstart-based installation can be configured through the CFG configuration file. The Kickstart configuration file can be created manually or through a GUI tool (i.e., *system-config-kickstart*) or by using the OS installer.

Let's create a Kickstart configuration file using the GUI (*system-config-kickstart*) tool.

Figure 2 shows the Kickstart installation options.

Figures 3 and 4 show the Kickstart file's partition information and network configuration using the GUI tool.

Figures 5 and 6 show the Kickstart file user and firewall configuration using the GUI tool.

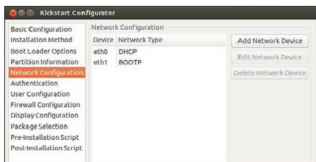

Figure 4: Network configuration

Figure 5: User configuration

Figures 7 and 8 show the Kickstart file package selection and post-installation script creation using the GUI tool.

Steps to install Ubuntu OS using the Kickstart file

After creating the Kickstart configuration file using the GUI (*system-config-kickstart*) tool, let's take a look at the
