

The Top FOSS Skills that will Get You Hired This Year

The FOSS appeal seems to be growing. Industry pundits reveal that open source skills can be a great differentiator for aspiring tech candidates in 2014.

The sluggish economy and the high number of job aspirants entering the market are impeding IT professionals' chances of landing a decent job or moving to a better one. No, it's not just because of the sluggish job market, but also because of the yawning skills gap, which can thwart the career growth of tech professionals. In such a scenario, you can boost your employability by learning or honing your open source skills, which are expected to be increasingly in demand in 2014. So, which are the FOSS skills that can give a fillip to your resume and offer the most bang for the buck this year? We, at OSFY, spoke to industry leaders to seek answers to this 'hot' question and understand the recruitment trends in 2014...

It's OpenStack, NoSQL and Hadoop all the way

The rapid growth in the big data and cloud computing domains has pushed IT companies to look for a skilled workforce that specialises in these hot sectors. Industry experts believe that technologies like OpenStack, NoSQL and Hadoop will be game changers for enterprises in 2014. The industry is moving towards adopting cloud computing in a massive way and technologies like OpenStack, NoSQL, Hadoop, Puppet, Chef, etc, have emerged as the *de facto* standards for an enterprise or organisation looking to develop a cloud strategy, believes Kavita Munshi, chief technology officer, EVP, Aptira. "This year will see high demand for job-seekers trained in OpenStack, NoSQL, Hadoop, et al, and cloud engineers with
