

A List Of Web Hosting Solutions Providers

BigRock | Mumbai

BigRock offers a wide variety of Web hosting solutions, catering to individuals, SMBs and enterprises. These include Linux hosting, Windows hosting, WordPress hosting, CMS hosting, e-commerce hosting, and reseller hosting (Linux). The company's shared hosting product is bifurcated into single and multi-domain hosting plans to enable customers to pick packages as per their needs. BigRock bundles the cPanel control panel with its Linux hosting packages that support the entire LAMP (Linux, Apache, MySQL and PHP) stack. BigRock offers data centre management tools (RackMonkey and Puppet), server monitoring tools (Nagios and Ganglia) and reporting tools (Graphite).

CtrlS | Hyderabad

CtrlS offers various types of Web hosting solutions that comprise VPS, the real cloud, the enterprise cloud, the private cloud, dedicated servers, hosted exchange, Smarteremail, SAAS apps, disaster recovery, high availability, load balancing and clustered solutions.

Its major Linux-based offerings are CentOS, RHEL, Ubuntu-based VPS, cloud and dedicated servers. It has hosted Zimbra and other Linux-based e-mail solutions, and has control panels for Web automation like Parallels, Cpanel, etc. CtrlS uses open source tools for some auditing, virtualisation and management activities.

eWebGuru | Noida

eWebGuru offers shared hosting, reseller hosting and VPS on Linux and Windows environments.

The company uses the CentOS distro in all its Linux servers. For VPS, it uses OpenVZ virtualisation. It offers VPS services only on Linux servers. The company basically manages its servers through the WHM and SolusVM panels, which are paid tools. However, for server firewalls, it uses CSF (ConfigServer Security and Firewall), and for server security and hardening it uses Mod Security tools, which are open source. For the database, the MySQL community edition is used and for scripting, it is PHP.

GoDaddy.com | Scottsdale, Arizona, USA

GoDaddy offers various types of Web hosting solutions. 4th Generation Hosting (4GH) is its most affordable Web hosting solution, with clusters of load-balanced servers distributing the load across several servers in a cloud environment. Other types of solutions offered include virtual dedicated hosting, dedicated servers and managed hosting. Major Linux-based offerings include 4GH Web hosting, cloud servers and dedicated, virtual private and managed servers running CentOS, Fedora or Ubuntu.

HIOX India | Coimbatore

HIOX India, a business Web hosting company, is currently involved in providing Web services, software/application development, Web content development, Web hosting, domain registration, Internet solutions and Web design. Shared hosting works on the famous LAMP (Linux, Apache, MySQL, PHP) stack.

Hostcats.com | Bengaluru

Hostcats offers various types of Web hosting solutions, including shared hosting, reseller hosting, VPS hosting, blog hosting and dedicated servers. Major Linux-based offerings include Linux VPS, Linux shared and reseller hosting. Open source tools used are Nagios, CentOS and Ubuntu.
