HostGator | Mangalore

HostGator is one of the world's top 10 Web hosting companies having already hosted more than 9,000,000 domains. It has employee strength of over 750 people providing efficient round-the-clock support. The Web hosting features include unlimited disk space and bandwidth flexibility, an easy to use control panel, unlimited sub-domains, FTP accounts, e-mail accounts, and a guarantee of 99.9 per cent uptime. As its servers are located in India, it offers low latency and fast access times, and a money back guarantee.

IBEE Hosting | Hyderabad

IBEE Hosting was started in early 2006 and caters to primarily the SMB sector. The company provides solutions like shared hosting, dedicated hosting, VPS and cloud services. The company is currently in the process of redefining its product range and releases much-needed solutions like secure hosting, high performance hosting in cluster and cloud infrastructure, etc. Seventy per cent of IBEE's shared hosting revenue comes from open source solutions like Linux-based OS servers.

Netspaceindia | Nashik

Netspaceindia is a part of the Abitindia Group Company, which is into IT related services. It offers low cost yet significant Web hosting solutions. Netspaceindia is one of India's fastest growing privately held Hosting Service Providers (HSP). It provides wholesale server rentals to e-businesses, application providers and hosting resellers. The company was founded in 2004 with an aim to provide hosting and other related services to its customers located around the globe. Its first priority is to provide customers with the best value and the most reliable hosting available, and the second is to propel the Indian IT industry to greater heights.

Net4 India Ltd | Noida

Net4 offers the following types of hosting services on both Linux and Windows platforms (with and without database support) -- shared Web hosting, dedicated hosting, cloud hosting and managed hosting. Major Linux-based offerings include PHP hosting, Java Tomcat, Ruby on Rails, Perl CGI, Python, CMS applications such as Joomla, WordPress, Drupal, etc, and MySQL and PostgreSQL for databases. The company uses open source monitoring tools such as MRTG and Cacti for leased lines, routers, switches, servers and network utilisation monitoring. The firm also uses Zabbix, an open source NMS to monitor its servers' health, checking the following parameters -- CPU, RAM, space, I/O, etc, to ensure a proactive alerts system. Additionally, the company uses Linux-based software load balancers and open source software inventory management, i.e., OCS Inventory, the open source version of the Xen/VMware server for virtualisation at testing and lab environments, the open source helpdesk ORTS, which is an ITIL-compliant helpdesk system, and the CentoOS Yum repository for patch management for all CentOS Linux systems.

Qualispace | Mumbai

Qualispace offers DNS management services with unlimited sub-domains, advanced database back-up and recovery services, assured anti-virus, fraud protection, spam filters, e-mail services like POP IMAP, e-mail forwarding, e-mail accounts, Webmail and many more.

ZNet Technologies Pvt Ltd (ZNetLive) | Jaipur

ZNetLive offers complete Web hosting solutions starting from shared hosting, reseller hosting, VPS, dedicated servers, cloud solutions, and V-ready servers to high availability solutions, etc. The company also currently runs a 'VPS Super Saver Offer' with free VPS for three, four and six months on signing up for one, two and three years, respectively. This offer is also available for reseller hosting. The firm offers Virtuozzo-powered Linux servers along with shared, reseller and dedicated server hosting. The company uses NagiOS to monitor the servers. Recently, the company announced the launch of its solid state drive-powered hosting services optimised for faster disk input/output performance. These next generation equivalents of HDDs are ideal for those with heavy websites that have lots of dynamically generated content.
