

Rajat Khandelwal:

Hey, I want to create my own blog (not on wordpress nor any other blogging site). I just want to create it myself, but I do not know how should I get started with it? Can somebody tell me what languages should I need to learn for this?

Like comment

John Keenan: HTML5, CSS3, PHP5 and MySQL.

KCay Mani Javed: PHP is simple and easiest.

Anand Prakash: People mentioned the languages you need to learn. Ok, but it will surely need time to develop skill on those languages, because you can't learn all of them overnight. Here I have some tips for you. Get a domain *get a gud name which sounds good search tips on google for finding gud domain name (only u need is money) 2. Create account on free hosting sites(u need domain and ofers an e-mail id) 3. download a website template (free) 4. Tweak the source code of template as u learn css ,html5, php, blab- blab- 5. Side by side create ur audience when ur site is good enough using facebook page, g+ etc. 6. When completed ur school, and u are skilled enough.....you will know what u need to do Next. Good luck.

Rahul Binjve: Well for the starters, start with HTML, CSS and Javascript. Basic static blog can be created with the use of these 3 technologies. If you want to add DB support & make your blog dynamic, learn PHP and MySQL. There are other things that'll surely help, if you learn them, like AJAX, JQuery, etc. Hope it helps.

Harshad Joshi: There is a superb tutorial of how to create a blog in 30 minutes using Django. Check arunrocks.com for code, video and tutorial.

Mohamed Amine Ben Slama: Php , html css mySQL and a bit of javascript should do it for a simple/ decent blog.

Vibhu Rishi: I recommend using Django. Here's a tutorial for making your blog : <http://www.djangorocks.com/tutorials/how-to-create-a-basic-blog-in-django/>.

Iftikhar Mirza: Go for PHP as it's easy and comprehensive.

Amish Banger:

I want to switch my OS from Windows to Linux. Which Linux flavour should be good to start with?

Like comment

Miguel Cardona: Linux Ubuntu, I have never looked back and while I do have a Windows machine because of my work, I can honestly say that all my other machines are with Linux Ubuntu. It's hassle free, no viruses, fast, slick and loads of software even though some is purist in terms of software development but other than that....it's the BOMB!

EAGLET GATEWAYS TO SOFTWARE NETWORKING & EDUCATION SOLUTION Pvt. Ltd.

We are emerging software development company and training institute situated in the heart of Pune City

Training Division

■ Eaglet Linux System and Kernel Programming Track

- Intel Assembly Programming on Linux and Protected Mode features of Intel Processor
