

Here comes a Raspberry Pi and Lego model of the cloud, for students

The affordable minicomputer, Raspberry Pi, has become impressively popular and more than a million such devices have already been sold across the globe. Researchers and scientists have been amazed by the impact of this computer, and they believe it has a major role to play in the technology space.

And now, the same mini-PC has been used with Lego to create a complex cloud computing model that can be used by students to understand the dynamics of cloud computing. This model has been designed by scientists at the University of Glasgow in the UK, and the model has been named Raspberry Pi Cloud.

This model was built by combining 56 Raspberry Pi computer boards on a rack made from Lego, which illustrates the cloud computing set-up.

The model has been created by Dr Dimitrios Pezaros, Dr Jeremy Singer, Dr Posco Tso and Dr David White, who work with the university's Computing Science department, and wanted the project to broaden access to cloud computing research and education.

OpenSUSE version 12.1 to be phased out

If you have been using the openSUSE 12.1 version, it's high time you moved up to later versions, in case you are looking for regular updates. The openSUSE 12.1 has apparently reached the end of its course, after being in use since it was released back in November 2011.

Since then, bug fixes and security support were being provided by SUSE. Now, the developers have recommended users to make the next jump and move to 12.2 and then version 12.3.

OpenSUSE 12.1 was the first release of the distribution, which was maintained by using SUSE's OpenBuildService, which offered improved participation by the community; from there onwards, the same set-up has been maintained for all other openSUSE distros.

You can get the iOS 7 theme on Android phones!

Every now and then, Apple announces a new iOS version for the iPhone and iPad, and most of the time you come across an Android version of the theme on the iOS also. This time around, too, Apple's latest iOS 7 operating system theme is available to Android phone users in the form of a theme called jboS7, which primarily is the Jelly Bean version of the theme and will be available to iPhone users later this year.

This jboS7 theme has been created by Shmogt (the developer's name, for sure!), who has apparently used some custom icons and the popular Nova Launcher's home screen replacement app.

Apple unveiled its latest iOS 7 mobile version at the Apple Worldwide Developers Conference (WWDC) 2013, and while the company may not like it, according to most experts, the latest version comes with an Android imprint (lock-screen look and style) and other features, like the notification centre and new music player.

A new baby-care app for young parents!

Mind Media Innovations Pvt Ltd has released its fourth smartphone application, 'Baby Blossoms', in Android Market.

'Baby Blossoms' is a smart app that aims at helping young parents in child rearing. The app includes a comprehensive list of features like Baby Growth Calculator, BMI/BMR Calculator, information on different vaccinations and a provision to set reminders for diaper changes, feeding times, etc.

Apart from the above-mentioned features, the app also helps you find baby shops and hospitals close by, and gives you a list of names for your baby (with the meanings explained). The app comes with other parental tips for young dads and moms, and useful tips on baby care.

Available in Google Play for free download, Baby Blossom works on all Android smartphones with the OS version 2.2 and above.
