

```

** Last message in was {'$gen_
cast',crash}
** When Server state ==
[state,3]
** Reason for termination ==
** {function_
clause,[[simpleServer,handle_
cast,
[crash,[state,3]],

[[file,"simpleServer.
erl"],{line,44}]],
{gen_
server,handle_msg,5,

[[file,"gen_server.
erl"],{line,607}]]],
{proc_
lib,init_p_do_apply,3,

erl"},{line,239}]]]]}
ok
10> simpleServer:get_count().
0
11> simpleServer:say_hi().
Hi!
ok

```

As you can see, a new *simpleServer* process is running, so the supervisor did its job!

The Erlang process manager

Erlang also provides a *process manager* with a GUI that allows you to look into the current state of your processes and check what is happening. You can run it as follows:

```

1> pman:start().
<0.34.0>

```

You can see the process manager running in Figure 3.

This article was a small introduction to the Erlang programming language and I hope that it will be the beginning

Pid	Current Function	Name	Mops	Kops	Size
<0.39.0>	idwait_is_mon_reply/2		0	13	219
<0.38.0>	gen_server_loop/6		0	1	235
<0.37.0>	gen_server_loop/6		0	9729	378
<0.36.0>	gen_server_loop/6		0	44390	5774
<0.35.0>	gen_server_loop/6		0	1512	614
<0.34.0>	gen_server_loop/6		0	49573	1672
<0.32.0>	gen_server_loop/6		0	1630	2593
<0.28.0>	gen_server_loop/6		0	58	242
<0.27.0>	gen_server_loop/6		0	286	242
<0.26.0>	gen_server_loop/6		0	4766	1614
<0.25.0>	gen_server_loop/6		0	8659	17753
<0.24.0>	gen_server_loop/6		0	36	237
<0.23.0>	gen_server_loop/6		0	1172	618
<0.22.0>	gen_server_loop/6		0	60	242
<0.21.0>	gen_server_loop/6		0	9	235

Figure 3: The Erlang process manager

```
[[file,"proc_lib.
```

of your Erlang programming journey, while giving you a better understanding of Erlang. I cannot say that you will continue using it after reading this article but I am sure that if you do, Erlang will change you as a programmer and make you look at programs in a different way! Happy coding!
