

YOU SAID IT

Wish to see more reviews in OSFY!

I have been a subscriber of OSFY for over a year now. Just renewed the subscription for one more year, because you made an offer I could not refuse! I subscribe only to get the DVDs, so that I can get Linux OSs. Most of the articles go right over my head! Anyway, I was pleasantly surprised to read about Grub2 in the May 2013 edition. This is a must-read for all Linux enthusiasts. Also, there was a review of Slackware Linux. Personally, I feel that Slackware is for geeks. Installation goes well, but updating, upgrading and installing applications is a hassle for the average Linux user like myself. We are used to the Windows-like GUIs of Mint, Ubuntu and, to some extent, Debian. Anyway, that was a good review. I welcome more such reviews! I also wish that you would include a few interesting rare Linux Distros like Hybryde Linux: <http://www.hybryde.org/site/index.php?myModal>

ED: Your feedback is indeed interesting and we would like to thank you for writing to us. Well, we have taken a note of your suggestions and we will try our best to give you what you want. It's all about balancing the diverse interests of OSFY readers, so you will find a blend of all sorts of articles for open source lovers in the magazine.

Provide an Ubuntu software repository DVD

Last month, I saw OSFY on a newsstand and I instantly bought it. And now I am a proud subscriber to your magazine. I am really delighted with it since the contents are immensely useful to me.

I have a request. I am a new user of Linux, migrating from Windows. Currently, I use Ubuntu 12.04 LTS. I want to install the extra software packages from the Ubuntu software repository. But I have no Internet connection.

So, could I request you to provide me an Ubuntu software repository DVD along with a tutorial on how to install it without any network connection.

I will be highly obliged if you could help me. Thanking you in anticipation,

—Tamal Krishna Rakshit,

tamalkrishna2010@gmail.com

ED: Thanks a lot for the great feedback. Well, your idea is good but it is not feasible for us to include the repository of 50-60 GB software on a single DVD that comes bundled with the magazine. I suggest that you search the Net and find out which companies can provide you the entire repository you desire.

On changing the name of the magazine

I have always been a regular reader of LFY and really like the variety and insight into the different topics that the magazine provides. Keep up the good work. I would like to know the reason for renaming LFY to OSFY? Previously, when it was still LFY, the magazine featured articles and delightful insights into different open source domains, technologies and packages. So, has only the name changed or the content too?

—Arjun Majumdar, arjun.mnemonic@gmail.com

ED: Thanks for the wonderful feedback. It helps us to do better. Well, Linux is undoubtedly indispensable in the open source world, but the scope of open source technology has widened beyond Linux. To keep pace with the changing times, we decided to rename our magazine. While the name has changed, the content remains the same. Let us know if you have any further query.

Include more free stuff on the DVD

I love OSFY and I have benefited immensely from the enriching articles. It is indeed good that we have a magazine like this. I think it would be even better if you included some free software, free lectures on technology, videos and books on programming languages, the latest tech trends, the source code of some hobby projects, games if possible, etc. It is not possible to try all the Linux distros you include in CD. So you can add one image of a Linux distro and fill the remaining space with the freebies I mentioned.

—Ishwargouda Patil, patil.ishwargouda09@gmail.com

ED: It is indeed a pleasure to receive a word of appreciation from our readers. Such mails pep us up and help us deliver to our readers' satisfaction. We have taken note of your suggestions and it has made us ponder over the many possibilities of what we can provide on the DVD. Let's see how things shape up and we will definitely let you know whenever we plan to implement these suggestions. Till then, keep sending us your suggestions.

An Android video player

I haven't seen a Linux distro (like Debian, which has support for ARM architecture) so far, on any mobile. We know that Linux has evolved so much, especially its command line interface. In comparison, Android is a new entrant. For instance, mplayer has not yet been ported to Android. All we see is a plethora of video players. Personally, I have not seen any Android video player that provides a way to advance and delay subtitles like 'y' and 'g' in mplayer. Please note that it is not about shifting the whole timeline of the subtitles but changing some dialogues that appear
