

Apps Development: A Career with Immense Growth Possibilities

For someone looking to reach for the sky, apps development is a great field to be in, giving young developers the opportunity to make money as well as a name for themselves.

According to research conducted by Canalys' App Interrogator, there has been healthy growth in the download and purchase of apps on mobile devices. The research conducted across the four stores—Apple's App Store, Google Play, the Windows Phone Store and BlackBerry World, shows an 11 per cent increase in consumption in Q1 2013 worldwide when compared to Q4 2012. The research also shows that the direct revenue from paid-for apps, in-app purchases and subscriptions combined, grew by a slightly more modest 9 per cent. Combined, downloads from the stores amounted to more than 13.4 billion, and revenue

reached \$2.2 billion (before revenue sharing).

If there is anything that is constantly growing in the world of technology, it is the number of applications, whether it is in the mobile world or the Web space. This is why apps development is emerging as one of the hottest career options for modern day developers.

According to Saurabh Singh, CEO and founder, AppStudioz, app development is one of the most lucrative career choices for tech professionals. He says, "Whether it is freshers or experienced professionals, modern day techies want to get into the field of app development." AppStudioz
