

A List Of Leading Cloud Solutions Providers

Brocade | Bengaluru

Building on Brocade VDX switches with Brocade VCS Fabric technology has enabled cloud service providers to build networks that scale without disruption. This highly automated Ethernet fabric reduces network complexity and enables you to add services on demand, and reduce the costs associated with network changes and additions. Coupled with Brocade Network Subscription, a pay-as-you-go acquisition model, Brocade can help you meet your networking challenges with the flexibility you require. Brocade's recent launch of the 'On-Demand Data Center' delivers simplicity, scalability and resource utilisation. The result is a purpose-built network infrastructure for highly virtualised and cloud computing environments.

Cisco Systems | Bengaluru

Cisco and its partners provide cloud computing solutions that deliver people-centric collaboration, an assured good user experience, dynamic and efficient cloud infrastructure, context-aware security, and accelerated deployment. Using Cisco tools and resources, enterprises can build a private cloud that improves productivity and reduces costs. In addition, Cisco can help service providers take advantage of new business opportunities to monetise cloud computing services, by offering hosted services on a public cloud. Cisco and its global strategic partners offer a technology-driven approach to solving business problems through committed partnerships.

Dell India Pvt Ltd | Bengaluru

With its proven experience and technology expertise in cloud computing, Dell offers a wide array of cloud services for IT organisations, which include application integration, enterprise notification, software asset management, storage, servers, desktops and networking virtualisation, on-site and off-site architecture integration into a hybrid solution, and hosted services for applications access, data centre infrastructure and systems management. Dell helps companies design their own flexible, integrated and secure cloud computing strategies, so they can build dedicated solutions on their premises and simplify the planning, development, deployment and delivery of cloud services.

ESDS Software Solutions Pvt Ltd | Nashik

The company's cloud services solution, the eNlight Cloud Platform, offers IaaS on a pay-per-consume model on the public and private cloud, with a fixed pricing model. eNlight Cloud, with its intelligent technology, senses the need for additional resources and also the need to withdraw them, thus ensuring top notch performance at the lowest possible prices.

Major open source-based offerings: eNlight Cloud is entirely based on the Xen kernel, which is open source. The company has customised the kernel to provide instant auto scaling of the CPU and RAM, which results in 70 per cent savings on the capex and opex required for hosting websites or applications.

Leading clients: Tencent, Podar International, Kafilla Tours and Travels, Ambuja Cements, KFC and over 150 leading companies in the private and public sectors.

USP: Intelligent auto-scaling, pay-per-consume, per-minute billing, a pre-paid usage model and instant provisioning (less than 3 minutes) of virtual machines with all popular Linux distros. Migrating a Linux dedicated server on eNlight Cloud has resulted in saving a minimum of 80 per cent of power.

Special mention: ESDS has consistently been honoured by government bodies, the media, OEMs, etc, and appreciated by its clients for its innovative products and services. The company has received numerous prestigious awards like the 'IT Enterprises (Special Award)-2009', the 'Green IT Infrastructure Award - 2010', the 'Best IT Enabled Services - 2011' by the government of Maharashtra, the 'Industrial Excellence Award for Innovation' from the Dainik Bhaskar Group, the 'Most Promising Banking Technology Solutions & Service Provider in North Maharashtra', and the 'Young
