Hooduku India Pvt Ltd | Bengaluru

Hooduku India Pvt Ltd has been providing IT solutions in the cloud and Big Data domain, focusing heavily on open source technologies. The team of experts and architects at Hooduku Global strongly believe in the open source community, and have made contributions, including a Web project, to the Linux Foundation. Till date, Joomla/CMS migration to the Microsoft Azure Cloud Platform (2009) and early adoption of, as well as contributions to, open source Big Data technologies such as Hadoop clusters and Nutch search engines (2006-07) are accomplishments that the Hooduku team is proud of. These contributions have been well received within the world open source community. With public and private cloud adoption ramping up with OpenStack implementations, members of Hooduku are actively getting involved and have committed greater support in the coming months.

HP | Bengaluru

HP Cloud provides an open cloud interface built on standards-based OpenStack APIs to support migration. It provides a variety of solution tools from our solution partners to deploy complex multi-tier applications. It helps you launch your websites, enterprise applications, Big Data, analytics, and mobile workloads, on the cloud. It also ensures availability and security, and manages your workloads for scalability. The company provides complete solutions to simplify the deployment and management of your production applications on the cloud.

IBM | Bengaluru

IBM SmartCloud Enterprise+ is a fully managed, security-rich and production-ready cloud environment designed to ensure enterprise-class performance and availability. SCE+ offers complete governance, administration and management control along with service-level agreements (SLAs) to align your specific business and usage requirements. Multiple security and isolation options built into the virtual infrastructure and network keep this cloud separate from other cloud environments. IBM recently announced that its cloud services and software will be based on an open cloud architecture. As the first step, the company unveiled a new cloud offering based on open cloud standards, including OpenStack, which significantly speeds up and simplifies managing an enterprise-grade cloud.

Kryptos | Chennai

Kryptos' cloud-related services are highly elastic and scalable, and are available on a pay-per-use model at a low cost due to economies of scale primarily delivered by leveraging Internet technologies, virtualisation services and the availability of computing power.

NetApp | Bengaluru

NetApp's extensive ecosystem of industry-leading technology and delivery partners widens the expertise and choices available to its clients. That means one can leverage the most innovative technologies across all layers of your cloud solution. NetApp's cloud solutions help its clients to accelerate their time to deployment with pre-validated infrastructure solutions, automate and manage end-to-end cloud management integration, and augment their on-premise private cloud with cloud services built on NetApp. In addition, NetApp's Professional Services experts can help clients design the path to cloud computing, successfully delivering IT as a Service (ITaaS).

Netmagic | Mumbai

Netmagic SimpliCloud is an enterprise grade IaaS (Infrastructure as a Service) cloud platform built on the latest generation of virtualisation techniques. This means that you can grow your business to reach new markets without worrying about upfront capex on physical hardware.
