

Netmagic's HybriCloud service allows customers to have a mix of virtual and physical infrastructure if they need it. Customers subscribing to its co-location or dedicated hosting services can augment existing physical infrastructure by securely provisioning additional capacity from its public cloud, and pay as per usage.

Oracle India Pvt Ltd | Gurgaon

Oracle Cloud offers a broad portfolio of Software as a Service (SaaS) applications, Platform as a Service and social media capabilities, all on a subscription basis. Oracle Cloud delivers instant value and productivity for end users, administrators and developers alike through functionally rich, integrated, secure, enterprise cloud services. With Oracle Cloud, one gets enterprise-grade application and platform services based on best-in-class business applications and the industry's leading database and application server, managed by experts with over a decade of cloud delivery experience. More than 25 million users rely on Oracle Cloud every day.

Sify | Chennai

The company's enterprise cloud services claim to offer the best-in-class cloud computing services in India with its unparalleled expertise in storage and network services on the cloud. The platform offers a bouquet of intelligent services for enterprises looking to grow their business based on contemporary technology with minimal-to-zero capital expenditure on physical hardware, almost instantaneously, thus leading to a faster time-to-market.

The services leverage the features of virtualisation, and capitalise the massive scalability of the cloud infrastructure, enabling customers to provision, ramp up, and downgrade their virtual compute, storage and network resources.

Tech Mahindra | Pune

Tech Mahindra's cloud enablement services provide designs of cloud IaaS, SaaS and PaaS infrastructure, as well as software and product development, and deployment on the cloud. Other services are: service exposure enablement, on-demand; self-provision automation; shared and fully virtualised compute, network and storage services; security assessment and controls implementation with industry partnerships; and telco enablement for communications/collaboration-as-a-service such as messaging, IM, Web/audio conferencing, document sharing, etc, which is enabled over the IaaS foundation layer and offered via multiple partnerships for telco/enterprise customers.

VMware Software India Pvt Ltd | Bengaluru

The company provides solutions across the three layers of an IT environment -- infrastructure, applications and end-user computing, and thus helps the customer adopt a complete cloud environment. VMware has a long history of support for open source software in its products. In addition to collaborating with the open source community, VMware works closely with major Linux vendors to ensure high quality support for Linux guest operating systems running on VMware hypervisors. As an active participant in the open source community, VMware has open sourced the VMware tools as the Open Virtual Machine Tools project, contributed the VMI (Virtual Machine Interface) paravirtualisation code under the GPL, collaborated with the Linux kernel community and others in the development of paravirt-ops, and sponsored OSDL's DCL F2F.

Wipro | Bengaluru

Wipro's solutions address customer requirements on a pay-per-use model, with dynamic infrastructure provisioning capabilities. By leveraging its domain knowledge, systems integration expertise, tier 3 data centres and industry partnerships, Wipro's cloud computing services provide best-of-breed solutions that improve the efficiency and effectiveness of IT in organisations. Wipro's Private Cloud solution brings together the benefits of traditional IT management, including operational excellence, automation and service delivery models, and merges them with the dynamic potential of cloud architectures. Wipro's Private Cloud solution provides the foundation for a strong, flexible and valuable cloud infrastructure that supports IT operations and delivers exceptional service quality to the business.
